Thread: [\[Win 7\] Changing A wireless Dynamic IP address?](#)

xinvity - May 19, 2014, 6:52 am

Would anyone teach me the steps on changing a Dynamic IP address? I'm currently wireless as well.

Sorry if this is where I shouldn't be posting a thread, this seemed like it was most suiting.

I'd appreciate if someone could help me out

(May 19, 2014 07:18 AM)Aur? Wrote: [\[CITE\]](#) Depends. Changing a public or private IP address OP ? How would I figure this out?

Mozilla/5.0 (Windows NT 6.1; WOW64) AppleWebKit/537.36 (KHTML, like Gecko)
Chrome/34.0.1847.137 Safari/537.36

I have a password on my OWN router, my router is Fre**** II Wireless Connection, I put in a password.

Am I able to change it?

The only way to change your public IP address is to call your ISP and request a new one or totally unplug your router for sometime (can be 2 minutes like it could be 4 hours or a whole day) and then plug it back and hope that your ISP will have assigned you a new IP address.

So just leave it unplugged for a while? Will that most likely work?

Yes.

If it doesn't work after 5 minutes, leave it unplugged a bit longer.

Imx04zq - May 19, 2014, 10:35 am

Yep, what Aura said.

You can use IP chicken to monitor changes in the address.

You'll have to call your ISP or leave it unplugged for a way longer period of time OP.

Thank you for your time. is the ISP lenient with changing IP's? or will he be conspicuous about why I am doing this?

Some ISPs will change it without asking questions, but most of them will most likely ask you why.

Well, why do you want to change your IP Address ?
