Very basic, bad choice of font. 4/10

Pretty good but you need a better choice of colors and fonts. I recommend using dafont.com.

I don't like how you did circles and such for pricing and the payment methods.

Kill the drop shadow on the top.

Use some different colors.

Add quotation marks on that quote.

Please, use a different font.

If that's bebas nue its fine but the badly done cursive one doesn't fit well with this.

Add some pictures maybe?

Oh, the watermark on the bottom is it a bit to big.

Pretty nice, font is kinda blurry though. And I don't like that purple but that's just me.

apart from the choice of font, the thing that sets me off the most is those things below the prices.
they look kinda off-place

I do not like the font.

Rating: 7/10

I would recommend removing those drop shadows or make them a little less darker like changing the opacity of it. Just like the others said, the font is just terrible, I recommend looking at fonts from dafont.com, fonts like Serif and Sans Serif. The background color doesnt seem to fit honestly, I find it odd that the products are leaning to the left more than instead of being centered. Descriptions should be readable so don't use drop shadows on curly text, if your looking to go for a flat design, brighter background colors should do it. Check out adobe kuler.

Fonts need work

Colors need work

5-6/10

I like it for the most part, but I would highly suggest a different choice colours. Also the 3/4 finished off centered bubbles really is the main eyesore for me. Its a good start tho!

It doesn't look so good, and you need to align everything it looks messed up..! I am sorry if I'm being to harsh but these are just easy improvements you can do in minutes, good luck!
