Thread: [Tutorial - How to create TeamSpeak 3 Server on Debian](#)

xFu5i0n - May 19, 2014, 12:33 pm

Hello guys,

Follow all steps to create your own secure teamspeak server.
You want an debian server installed with internet connection.

PHP Code

```
<?php
```

apt-get update

Used to re-synchronize the package index files from their sources.

PHP Code

```
<?php
```

apt-get upgrade

Used to install/download the package.

PHP Code

```
<?php
```

apt-get install nano iptables

Used to install/download the nano package.

PHP Code

```
<?php
```

useradd -d /home/teamspeak PASSWORD

Used to create teamspeak user.

Good, now you will need files of teamspeak.

Go to: www.teamspeak.com/?page=downloads and get the release version.

PHP Code

```
<?php
```

cd /home/teamspeak

Used to enter into directory.

PHP Code

```
<?php
```

wget URL-TS3-SERVER

Used to download the server files from teamspeak to ensure you are downloading the latest version.

PHP Code

```
<?php
```

tar -zxvf FILE-NAME-MAVED

Used to untar all files.

PHP Code

```
<?php
```

mv FOLDER-NAME serverfiles

Used to rename your directory.

PHP Code

```
<?php
```

cd serverfiles

Used to enter into directory.

PHP Code

```
<?php
```

```
./ts3server_startscript.sh start
```

Used to start teamspeak server.

Get your serveradmin users and password.

PHP Code

```
<?php
```

```
./ts3server_startscript.sh stop
```

PHP Code

```
<?php
```

```
./ts3server_startscript.sh start query_port=5469
```

PHP Code

```
<?php
```

```
iptables -A INPUT -p tcp --dport 5469 -j DROP
```

PHP Code

```
<?php
```

```
iptables -A INPUT -p tcp --dport 8000 -s YOUR-IP -j ACCEPT
```

PHP Code

```
<?php
```

```
./ts3server_startscript.sh start
```

Your teamspeak server have been installed, have fun.

I thought this was going to be a question :P

Nice tutorial however, sure it will be useful.
