Thread: [\[IOS Tut\] Unlimited Instagram Likes! \[UPDATED\]](#)

U63R - May 19, 2014, 1:57 pm

Inspiration to this tutorial from here: Spoiler [\(Click to View\)](#)
[Lauge2000's tutorial on Rooted Androids.](#)

Proof that I got over 33k likes using this method.
Spoiler [\(Click to View\)](#)

[Maxemtefalls Instagram](#)
<http://instagram.com/maxemtefall>

In this tutorial I will be showing you how to get free Instagram likes with simply editing some code in your iDevice.

Items needed and things to keep in mind:

Jailbroken iDevice - iPhone/iPad/iPod
InstaLiker app.
iFile.

The app you will be exploiting is not so well developed and will probably crash and lag sometimes.

Step 1: If you do not have iFile

Spoiler [\(Click to View\)](#) Grab your iDevice and download iFile from cydia. I think that you can add the <http://repo.hackyouriphone.org/> repo and download it from there.

Step 2:

Download InstaLiker from appstore. Here is a link to the app:
<https://itunes.apple.com/se/app/instalike-instaliker-like4like/id755812888?mt=8>

NEW APP: Credit to: [Blue Spy](#)
"Since Instaliker is no longer in the app store you will need to search Tongbu in safari <http://www.tongbu.com/> and install that app store (on your iDevice.) Once you've downloaded that search Instaliker on tongbu and install.
What it looks like --> <https://lh6.ggpht.com/-VY5Y9QCtgOiHKEwyC...T4-4X=w300>"

Step 3:

Open the app and sign in.

Step 4:

Open iFile and navigate to
Applications > InstaLiker > Library > Preferences > Metinogtem.Instaliker.plist.
Choose "Property List Viewer".

Step 5:

Scroll down until you see "UserPoints". Change that value to "500". The value divided by 2 is the amount of likes you will receive.

Step 6:

Go back to "InstaLiker" select your picture and the amount of likes you want. Press "Ok" and it is all done.

Please leave feedback and I hope you all have an awesome day!

This app is also vulnerable to finding the username and password to the account you are getting likes on.

Use iFile, go to the same point location "Metinogtem.InstaLiker.plist.", property list view the file and locate fields 'username' ; 'password'.

Plain text, not encrypted.

Any tut on how to use it on android?

Solved - I tried to use Root Browser :P and it worked thanks for this Thread BTW.

koil - June 19, 2014, 2:38 am

Thanks for the tip OP.

Theres another way to do it if you tend to dislike file explorers for whatever reason.

Works well on Android (and should also on iPhone) - through the use of mem editors (e.g. game killer), you can edit the value of your current points in one of those instalike apps.

Note - Instagram might send you a 'We find your activity suspicious, and you will need to reset your password' mail. Reset, and repeat!

Despite what some say this method works. This gave me the idea and I was able to do a similiar thing on a twitter app to get RTs/Followers/Favs. (can't find other apps with .plist which has a userpoints value, but was able to change cost of 5k followers to 1 coin on a twitter app by changing some code elsewhere which worked)

Yeah that is true. But on some of the apps that are server based you are able to use an App Store credit cracker. That makes the InApp purchases free.

xploD - July 20, 2014, 4:31 am

I know a way where you can pretty much get unlimited likes. It uses another one of these apps. However it doesn't involve editing the files, you use the program just as you would but it becomes autopilot. So can leave your phone next to you while you bring in the likes. The programs a well developed app as well and is one of the most popular, I usually get about 3k likes a day thanks to it. Involves a \$5 investment cost though. So not sure if its worth writing up a tutorial for it.

If you go into your iFile settings (gear icon in bottom left), in File Manager there is an option called Application Names, turn that on.

For those of you saying that they downloaded "instaliker unlimited," this is the way that THEY did it. You shouldn't be relying on things that other people made so that you can do something.

Figure it out on your own, that's the only way you'll ever progress.

The Tongbu app is weird as fu. I wouldn't recommend it, it installes a profile onto your iOS device without permission. And when it has installed, I'm 100% sure that it has all your info from your phone.

In this tutorial I will be showing you how to get free Instagram likes with simply editing some code in your iDevice.

Items needed and things to keep in mind:

Jailbroken iDevice - iPhone/iPad/iPod
InstaLiker app.
iFile.

The app you will be expoliting is not so well developped and will probably crash and lag sometimes.

Step 1: If you do not have iFile

Spoiler [\(Click to View\)](#) Grab your iDevice and download iFile from cydia. I think that you can add the <http://repo.hackyouriphone.org/> repo and download it from there.

Step 2:

Download InstaLiker from appstore. Here is a link to the app:
<https://itunes.apple.com/se/app/instalike-instaliker-like4like/id755812888?mt=8>

NEW APP: Credit to: [Blue Spy](#)

"Since Instaliker is no longer in the app store you will need to search Tongbu in safari <http://www.tongbu.com/> and install that app store (on your iDevice.) Once you've downloaded that search Instaliker on tongbu and install.

What it looks like --> <https://lh6.ggpht.com/-VY5Y9QCtgOiHKEwyC...T4-4X=w300>"

Step 3:

Open the app and sign in.

Step 4:

Open iFile and navigate to
Applications > InstaLiker > Library > Preferences > Metinogtem.Instaliker.plist.
Choose "Property List Viewer".

Step 5:

Scroll down until you see "UserPoints". Change that value to "500". The value divided by 2 is the amount of likes you will receive.

Step 6:

Go back to "InstaLiker" select your picture and the amount of likes you want. Press "Ok" and it is all done.

Please leave feedback and I hope you all have an awesome day!

I go to the website (which is unreadable haha), i try to download the App Store from the official website, switches to home screen (ipad btw), Icon of the App Store shows up, downloads till á 75% then the download thing disappears and the following error pops up:

"App download not possible"

"blablabla2.3.2 cant be installed on this moment"

it has 2 buttons which are "Ready" and "Again".

"ready" does nothing, the error popup disappears, thats it.

"again" does the download again, then ... how i already explained it, goes till around 75%, stops, error sign.

Also Google couldn't solve this problem :c

Did u tried things like, update instagram, logout instagram, remove instagram?

Pimps - August 21, 2014, 7:54 am

the instaliker version of instagram is standalone.

You can have just this app on your device to let it work. Having instagram or not, doesn't change the functionality of this app.

I tryed everything, also resetting instagram. I thing it's a server-side problem, maybe instagram flagged as BAN the login of this app for my account.

The tongbu app is still working, if you have trouble installing it try select the bottom download on the website with the pineapple symbol. Also just because it's in Chinese doesn't mean it's unsafe.

Sorry forgot you need to install app sync to your device. To do add <http://repo.biteyourapple.net/> to your cydia sources, once installed search app sync for ios 7 on cydia then install. This should fix most problems with installing the apps.

I think it might have something to do with how many people use the app, the max i received on a image was 10k likes. Since it's no longer on the app store it would limit how many people still use Instaliker. It could be your theory though. :)

I have two accounts my personal account I cant log in at first, I get the same message. I log in with my test account and it gets me in.

Then I use Ifile to change the username / password to my personal account, make sure you exit the app before you change you username and password, then re-open the app and you should be good.

do you have any solution how to reset everything?

Pimps - August 28, 2014, 5:53 am

BEWARE

I'm discovering suspicious things in this app.

The app automatically uses your account to like pictures of other users.

In this moment when i login with any account, the password is getting reseted in few minutes from instagram caused of "suspicious activity".

When i check the liked pictures (inside my instagram account/app) i see toons of likes i never did.

I think that the app has changed his "philosophy". I don't think it's safe anymore

Last time (now) the app liked 39 pictures in less than 2 minutes. This means that you can get your password reseted more than once a day and that instagram can ban you, if you make more likes than their "limitations" per hour/day.

Thanks spankyDanky for your solution, but i'll investigate about this problem before trying to access the app once more.

This is not online. This is simply an "Offline" Viewer.

Example: I have a Photo that has 5 Like. I change it to 10,000 Likes. I go on to my Friends phone and look at the Pic. That supposedly has 10,000 Likes. It turns out it's got 5 Likes still.

Why is this?

With any online game, you must Decode the server and have on Boot-up for the changes to take effect. This simple is a "Binary File" that can be accessed offline, Therefore, this is a Offline Viewer only. I hope this is a lot clearer to some who install this. I hack many Online iOS Apps. Visit iOS Gods/iOS Cheaters if you want proof.

Add my Repo if you want an Actual Instagram Bot that Likes and Follows you.

This is Decent but old. It's still working, just not like it use to.

None the less, great tutorial!
