Thread: [DARKCOMET SHOWING"RUN"](#)

nemesisobaara - May 20, 2014, 12:04 am

Help!!! I set up darkcomet and crypted it clean but when i send it thru mail as attachment and try to download and click it like the recipient will normally do, it shows run and not the normal silent way..what I mean is that wen I download it from the email attachment. And click on it, it pops up the RUN tab..what can I do to stop this?

bandors - May 20, 2014, 12:07 am

Shoot me a PM with your skype, I can hop on skype/tv and poke around to fix it myself.

Pyrion Flax - May 20, 2014, 12:07 am

You could try spoofing the file.

Also, I wouldn't use email attachments.

Upload it to Dropbox and send them the direct link.

Good luck!

....Dropbox....

Serious? Use ge.tt OP, it's much nicer IMHO.

ge.tt is down for some reason, so thats not a very good option atm

Anonmoosekaab - May 20, 2014, 6:18 am

What do you mean? You can't do a silent launch unless you can digitally sign the program. It's due to something in windows called a zoneid. However once your file is launched once, most crypters will remove the zoneid so this dialog no longer appears.

...ge.tt....

Serious? Use an anonymous/not distributing file hosting such as www.rghost.com, it's much nicer IMHO.

I also prefer rghost, because ge.tt just suspends your file straight away if it finds out it is infected. Annoying.

Hello I have dark comet and i have done all settings correctly but when i send to victims and they click on it

the slaves doesnt come to my pc list.

Please what may be the cause of this?

Please what may be the cause of this?The cause of it is that Darkcomet is a outdated rat that probably has infected source code. Congrats, you're offically retarded.

Thanks for bringing a 2014 thread back to life.

iwork247hours - December 18, 2019, 1:32 pm

Okay thank you but what is the latest tool for setting up RAT like?

Something similar like darkcomet.

Thank you.
