Thread: [\[Web Application\] CORS- Cross Origin Resource Sharing](#)

pwntoken - May 20, 2014, 9:59 am

Has anyone got a good resource to study CORS based web application attack vectors with exploitation POC? I believe CORS and Client Side Storages are vectors coming from HTML5. Sh4rk is the best known research I had seen which was presented in Defcon, I still need more exploitable resources or POC where I could study these vectors? anyone has any idea about the exploitation methodology?
