Thread: [HTML Aligning](#)

Aquilaane - May 21, 2014, 9:54 pm

So,

At the footer for my forum I am trying to put our logo. I want the logo to be center of the forum description on the left and the links on the right. I can get it to align center, but I don't want it center of the table. I want it center based on those two objects.

Example:

Spoiler ([Click to View](#))

It needs to go right more.

The code I have:

Spoiler ([Click to View](#))

Code </div></div>

```
<div class="wrap"><div class="bmwrap"><div id="bottommenu">
<div class="span3">
<h3 class="columnHeader"><i class="icon-globe" style="margin-right:7px"></i> About
{$mybb->settings['bbname']}<span class="line"></span></h3>
<p>{$mybb->settings['bbname']} is a coding forum based around active members in a comfortable
and growing community.</p>
<p>&nbsp;</p>
</div>
```

```
<a href="{ $mybb->settings['bburl']}"></a>
```

```
<div class="span3">
<h3 class="columnHeader"><i class="icon-link" style="margin-right:7px"></i> Links <span
class="line"></span></h3>
<ul class="navList">
<li><a href="{ $mybb->settings['bburl']}/myawards.php"><i class="icon-angle-right hidelink"></i>
Awards</a></li>
<li><a href="{ $mybb->settings['bburl']}/showteam.php"><i class="icon-angle-right hidelink"></i>
Team</a></li>

<li><a href="{ $mybb->settings['bburl']}/stats.php"><i class="icon-angle-right hidelink"></i>
Stats</a></li>
</ul>
</div>
```

put your element into a table, then you can control the layout more precisely

Aquilaane - May 22, 2014, 4:15 pm

How would you suggest I do this so that it still fits in the footer properly?

**The-Noob** - May 23, 2014, 2:58 am

Maybe use some CSS to push it over to the right slightly?

Are you working with bootstrap? because of the spans,

If so i suggest the following:

```
<div class="row-fluid">
<div class="col-md-4">
about goes here
</div>
<div class="col-md-4">
logo
</div>
<div class="col-md-4">
links
</div>
</div>
```

align the about left  
the logo centered  
the link right

If you are working with bootstrap 2 change the col-md to span.

Otherwise you could use the float tag : `.classname {float:left;}`

on all 3 classes.
