Thread: [Kali Linux USB Boot help?](#)

Mr..... - May 22, 2014, 5:36 pm

Ok, I have been wanting to install kali as a separate operating system on my windows 8 pc. I used win32diskimager to burn the 64 bit version of kali linux to the usb. I then went into my UEFI and changed it to Legacy support then changed it to usb first. Well kali comes up asks me for everything. I format my disk, then during the installation period after that it says installation failed. I have tried redoing it using the install window. I am currently downloading a second 64 bit kali right now to try to reformat my usb to boot from it. Does anyone know why this is not working?

Or you just can download RUFUS and have more options of installing it

vexator - February 2, 2018, 5:40 am

As AisB states, rufus is a great tool.

I will also recomend using YUMI (Your universal Multiboot installer)

It works great for Kali linux.

If you are using a linux system to mount your Usb, there are no better options that "dd"
