Thread: [Where To Upload And Scan Crypted Files And Where Not Too \(New Scan Site Added\)](#)

GreekSkunk - May 24, 2014, 10:15 am

First of all where to scan your crypted files without any worries -:

<http://nodistribute.com/t> (DONT USE THIS MADNESS) Send samples to Esetnod)
<http://razorscanner.com/>
<http://scan.majyx.net/index.php>
<https://maximscan.net/>
<https://www.maximscan.net/>
<http://scan.weddy-official.com/> (unlimited)
<http://fuckingscan.me/index.php> (Unlimited)

Yea, believe me or not but your BEST and SHOULD BE ONLY choice is to always just use
***ingscan.me .Do not act cheap otherwise you Ruin your crypted files.

Where NOT to scan your crypted files ; NEVER -:

<http://www.virustotal.com>
<http://www.jotti.org>
<http://www.viruschef.com>
<http://www.novirusthanks.org>
<http://www.donotdistribute.com>

Or Any Other which is not in Trusted Site List

You might be wondering i put some serious so called trusted not to send samples sites in that list but that is indeed REALITY. Believe it or not your choice.

Where to upload your crypted files -:

<http://www.hackforum...php?tid=3683704> (Best choice)
<http://directxex.com/> (Direct linking available for free)
<http://locker.su/> (Direct linking available but paid)
<http://rghost.net/> (Direct linking available for free)
<http://www.zipstash.com> (Not sure 'bout this one)
<http://www.anonload.com/> (An this one is Awesome)
<http://gfile.ru/>

Where NOT to upload your crypted files -:

<http://www.dropbox.com>
<http://www.mediafire.com>
<http://www.dropnsave.net>
<http://www.freewayhost.net>
<http://www.filetolink.com>
<http://www.shotrush.com>
<http://www.drop.st>
<http://www.zalil.ru>

<http://www.wss-codin...load/upload.php>
<http://www.sharesend.com>

How to test your Remote Administration Tool (RAT) crypted server by yourself -:

Create server using localhost ip 127.0.0.1 and CRYPT it. Test it on yourself if it works then it means/it confirms it will work fine for you and you will get connections even if you create server with no-ip duc ip address and stuff and crypt it and spread it.

Where NOT to test your Remote Administration Tool (RAT) crypted server by yourself -:

anubis.iseclab.org

Never use anubis if you do so you are just letting them send your crypted files to av companies and analyzing by different av companies

If you REALLY want to keep your crypted files safe then act what is written above.

edit: sorry for double post

-1234- - May 24, 2014, 10:39 am

Direct links from rghost work only on the IP where it was generated. If you try to access your direct link with another IP, you'll be redirected to the download page.

Dedicated007 - May 24, 2014, 10:45 am

Many upload and share site doesnt preserver ur spoofer extensions, this was just the post I am looking for. I used ge.tt which preserve extension spoofer. Although it distributes like a bitch

-1234- - May 24, 2014, 10:49 am

Note that you can search files uploaded to ge.tt using "exe site:ge.tt" in Google.

MoralsOrSurvival - May 24, 2014, 11:51 am

All this and there are still noobs on virustotal -_-
