Thread: [I am good at Java, if you have Java questions, post here or Sykpe me.](#)

x1029 - May 25, 2014, 12:42 pm

Hello! I'm pretty good with Java, post here for help or with ideas.
My Skype is merakitx1029@hackforums.net, hmu.

White Hat - May 25, 2014, 2:34 pm

I am getting into java. I get the understanding of it and what's possible with it.

But I want to create an app\program where it checks GPS location for where I am located. (this personal first app for my self)

And tells me suggestions of what I should take. The bus, the train or a cab from specific locations that I'm at.

Ex:

If I set different locations like "Home" (put address for that) and "Friend's home". It finds out which one I'm at or closest too.

It'll tell me if I should take the train or cab\bus depending on the distance. I would also have to put in information (on average) in a text box how long it would take for the bus\train\cab to get there.

Then it calculates ok this one will take long. But.. Then it takes in the prices for the trip (which I have to put in). And calculates which cost more. (The end result will have to calculate which is best method to get to the desired location)

For the bus in order to know how far it is from here as well it'll scan this web page I know that provide live feed on how far the bus is in miles.

It'll finally ask me a set of questions like, how much money do you have? How many trips does your train\bus card have. And how desperately from 1-5 do I need to get to this location.

It sounds long but I know it's not hard, I'm willing to do it. I don't really know the important info like the packages and imports an stuff I'd need. And I'm still learning along the way.

Suggestion app depending on if's\else

First of all, I would offer you to use google maps api, they are using REST services and they are very good.

Here is a short explantation: You need to make an HTTP request with a URL with the parameters you wish (such as the location - longitude, latitude, the address, and more), this code should be made in java. If you did everything correct, you will recieve a response of type (xaml or json, depends on the URL you sent, it is preferable to use JSON).

After you receive the response you need to deserialize it, which seems to be hard, but is very simple, for example JSON has many ways and built in methods to do it.

And then you can do whatever you wish with the objects you received.

So here are some links:

Google API - <https://developers.google.com/maps/documentation/geocoding/?hl=en> and <https://developers.google.com/maps/documentation/staticmaps/?hl=iw&cs=1>

JSON Deserialize - <http://james.newtonking.com/json/help/index.html?topic=html/LINQtoJSON.htm> or a better one (if you want to make many requests) - <http://blogs.msdn.com/b/webdev/archive/2012/12/18/paste-json-as-classes-in-asp-net-and-web-tools-2012-2-rc.aspx>

Also, if that doesn't work for you I'd just use Google maps. It does all that already.

Oh, Distance API is helpful too:

<https://developers.google.com/maps/documentation/distancematrix/?hl=en>

This is gonna be hard as a mother fucker but I guess I will do it.

x1029 - May 25, 2014, 3:03 pm

Hahaha, feel free to add me for support and help.

cs218087 - May 25, 2014, 3:08 pm

We should make a game together?

I'm not good but I mean I can work with basic stuff.

It could be educational for me and profitable for the both of us! I'll contact you on Skype.

x1029 - May 25, 2014, 3:11 pm

A game :/? Games are rarely profitable from experience :P. Unless you plan to hire a good graphics guy.

cs218087 - May 25, 2014, 3:12 pm

Well we should do some sort of project. I added you on Skype, accept it![/align]

x1029 - May 25, 2014, 5:18 pm

Idk if I'm really looking to do a project with someone ;P.

I'm more of a lonewolf.

Evil Corp - May 25, 2014, 5:46 pm

I'm getting an error when opening eclipse about jvm.dll, how do I fix it?

x1029 - May 25, 2014, 9:15 pm

What libraries do you have imported Lits?

Evil Corp - May 25, 2014, 10:25 pm

(May 25, 2014 09:15 PM)x1029 Wrote: [\[CITE\]](#) What libraries do you have imported Lits?

Well I downloaded from <http://developer.android.com/sdk/index.html?hl=sk>

Although I have both in 64 bit version of java and eclipse. Btw I'm new to java.

x1029 - May 25, 2014, 11:55 pm

Try this fix:

<http://stackoverflow.com/questions/7352493/failed-to-load-the-jni-shared-library-jdk>

<http://stackoverflow.com/questions/7352493/failed-to-load-the-jni-shared-library-jdk>

Thanks man, I fixed it! I had to complete reinstall the java on my computer. Cheers :D
Finally I can get started!

x1029 - May 26, 2014, 7:36 am

:P no problem. Hmu for any problems.

alexaggs - May 26, 2014, 1:29 pm

I will definitely contact you soon. After my studies are done I'm going to teach myself game development so I'm sure I have a lot of questions

x1029 - May 26, 2014, 4:57 pm

Sounds good to me haha. I've made a few games, only really shitty ones on Android though.

Coffee is love - May 27, 2014, 12:42 am

Hello x1029 I added you on skype but I've been trying to make a 3D java game engine and for some reason, somewhere in the code I slipped up and it's not showing the pixels or even the box.. just opens a window with the title of the game. I'm Tjw3st on skype, would love a proof read and help ;p

x1029 - May 27, 2014, 2:30 pm

Accepted, feel free to hit me up whenever.

Vector.A+ - May 1, 2015, 5:59 am

Please share a resource for learning java but please something complete and that could be used for hacking , exploits ,rats ,networking , crypters etc and a reference on how to do them
thank you
