Thread: [\[TUT\] How to setup a Dynamic DNS for RAT \[An Alternative to no-IP DNS\] with Pics](#)

Jinu - May 27, 2014, 3:30 am

[img]<http://k.min.us/ixnWAS7QxFeP.gif>[/img]

Hello everyone. I requested to create a tutorial on an alternative to no-ip DNS(freeDNS) by many members via PM, as well as my [free RAT helpdesk](#). So here I produced it with step by step procedures and pictures.

Dynamic DNS:

Dynamic DNS points a subdomain to your dynamic IP (changing IP.) This means you don't need to remember your IP address or worry about it changing when you're leaving the house. It also means that you don't need to give your IP address out in order for people outside your network to access your network, you simply give them your subdomain/hostname. So It will help you in RAT.

Why don't use no-ip?

NO-IP is stepping up their ban hammer and taking out the no-ip accounts that are associated with Blackhat activities.

What is an alternative to no-ip?

Free DNS is an alternative to no-ip.

<http://www.freedns.afraid.org>

How to setup the FreeDNS?

I) Navigate to the following website:

<http://freedns.afraid.org/signup/>

II) Enter your details and click "Send activation email".

Spoiler [\(Click to View\)](#)

III) Once you confirmed with your email, click on the "Dynamic DNS" tab.

Spoiler [\(Click to View\)](#)

IV) It will ask you your User ID and Password. Enter your details and click login.

Spoiler [\(Click to View\)](#)

V) Once you logged in, click on the "Subdomains" tab and then click "Add a domain".

Spoiler [\(Click to View\)](#)

VI) It will give you a form enter your details as instructed in the image below and click save:

Spoiler [\(Click to View\)](#)

It'll be like this:

VII) Now navigate to the following link and download and install the wget installer:

http://sourceforge.net/projects/gnuwin32/files/wget/1.11.4-1/wget-1.11.4-1-setup.exe/download?use_mirror=softlayer-dal

VIII) Now click on the "Dynamic DNS" tab. You'll see the details you have created recently. Then click on the "wget scripts". It will popup and show you to download one .bat file you save it on somewhere.

Spoiler ([Click to View](#))

Done.

How to check whether your DNS is working or not?

Once you have run your .bat, right click and edit it. It will show you a link similar to the one beneath you just copy that and check in your browser

[http://freedns.afraid.org/dynamic/update.php?\(your](http://freedns.afraid.org/dynamic/update.php?(your) private key will be here without brackets)

Spoiler ([Click to View](#))

1)

2)

3)

It will show your synced IP. Then you're good to go.

Conclusion:

So whenever you need to run your dynamic DNS, just open the bat file and the IP connected to your DNS will get synced. You should run this before doing RAT.

Note: When you open the .bat file it will pop up like a cmd window and will close in a second.

And in your RAT, IP/DNS part, enter your created subdomain.

I have created this one: jinuhftut.chickenkiller.com So I'll enter this in my RAT. It will be like this: the domain you have created followed by the port. jinuhftut.chickenkiller.com:1604

Spoiler ([Click to View](#))

Having any problems? Some solutions are here:-

[FreeDNS | Your DNS not working when you run? Look here \[Tutorial\]](#) by [5 Cents](#)

(Jun 14, 2014 11:39 AM)John Mayer Wrote: [\[CITE\]](#) Awesome tutorial man i enjoyed this one thank you !!!

Thank you pal.

Pe?cil - July 1, 2014, 2:19 am

Amazing thread. Thanks a lot. Just perfect to replace the * No-IP (NO-IP have problems with Microsoft these days, so your thread is.. perfect).

Mozart™ - July 1, 2014, 3:35 am

Should be stickied imo.

Really great contribution to HF, we're in need of this type of thread especially now due to Microsoft taking action on No-IP. Thanks a lot for this, have a great day!

-Lily- - July 1, 2014, 4:12 am

The .bat didn't work for me so I edited it to this, and no idea if it works or not but mind as well try it:

```
Code cd "C:\Program Files (x86)\GnuWin32\bin"
rem diksuk555.chickenkiller.com
wget -q --read-timeout=0.0 --waitretry=5 --tries=400 --background
http://freedns.afraid.org/dynamic/update.php?
```

random key you don't need to know about

roben81 - July 1, 2014, 4:18 am

Very detailed and HQ tutorial !!

It worked for me in DC rat.

Skyrock - July 1, 2014, 5:10 am

thx for the HQ tutorial !!

Very nice written

scarfaze001 - July 1, 2014, 5:44 am

and finally NO-ip is down..too bad anyway all clients lost

kilpparimies - July 1, 2014, 5:53 am

y0

Is the bat supposed to close once i open it
because when i open it its open for 1 sec and closes

/jeremy/ - July 1, 2014, 5:54 am

Great tutorial :), but shouldn't it be in the hacking tutorials section?

Snowlion - July 1, 2014, 6:05 am

Nice tut, but i have little problem. When i open the .bat file it closes instantly. What's the problem? :)

LOLdropper - July 1, 2014, 6:13 am

Great Tutorial Buddy ! Of Great Help at such a hard time while No-IP is kicking people's ass

Kh_RaT - July 1, 2014, 6:14 am

thanks man for this awosme toutorial very useful after the no-ip is down now by microsoft

Mr.Green™ - July 1, 2014, 6:15 am

Great tutorial, kinda in depression now since i lost all my slaves because of that Microsoft BS.
Thanks OP.

Also is bat script meant to just pop up and close itself?

learning2hack69 - July 1, 2014, 6:46 am

linkn hit me up on skype blah blah blah blah 34 blah blah

FoShizzleMyNizzle - July 1, 2014, 7:49 am

Great tutorial! Though I have the same problem with the .bat file is just closing

KSAGam - July 1, 2014, 7:53 am

same problem the bat file keep closing ,, wont work on darkcomet

RomanAtwood - July 1, 2014, 8:01 am

Is the FBI going to bust down this one also?

GeoEcon - July 1, 2014, 8:12 am

Thanks a lot br0

I tested in DC/XTREMERAT/CYBERGATE and work perfect :)

Have A Nice day!

For More port

Cent - July 1, 2014, 8:58 am

I get the error 'wget' is not recognized as an internal or external command, operable program of batch file.

MoralsOrSurvival - July 1, 2014, 10:21 am

OP forgot to mention you need to open the bat file with wget, i havent even tested on my slaves to confirm if it's working or not, excellent tutorial though

KSAGam - July 1, 2014, 10:34 am

(Jul 1, 2014 08:58 AM)Cent Wrote: [\[CITE\]](#) I get the error 'wget' is not recognized as an internal or external command, operable program of batch file.
me 2 !!!!!

someone tell us wat we doin wrong ??

(Jul 1, 2014 10:21 AM)MoralsOrSurvival Wrote: [\[CITE\]](#) OP forgot to mention you need to open the bat file with wget, i havent even tested on my slaves to confirm if it's working or not, excellent tutorial though
how u do that ?? lol ?????

Jinu - July 1, 2014, 11:38 am

(Jul 1, 2014 04:12 AM)-Lily- Wrote: [\[CITE\]](#) The .bat didn't work for me so I edited it to this, and no idea if it works or not but mind as well try it:

```
Code cd "C:\Program Files (x86)\GnuWin32\bin"

someone tell us wat we doin wrong ??

how u do that ?? lol ??????

Please post your errors. I'll try to resolve it ASAP.

Cent - July 1, 2014, 12:10 pm

I fixed "wget" is not recognized as an internal or external command, operable program of batch file.' error by placing the batch file in the same folder as wget.exe but now the only client that connects is my vm. My host PC wont connect to it at all.

Jinu - July 1, 2014, 12:22 pm

(Jul 1, 2014 12:10 PM)Cent Wrote: [\[CITE\]](#) I fixed "wget" is not recognized as an internal or external command, operable program of batch file.' error by placing the batch file in the same folder as wget.exe but now the only client that connects is my vm. My host PC wont connect to it at all. Maybe you installed it in your VM only.

Bamboo321 - July 1, 2014, 12:26 pm

I followed the tutorial step by step and nothing shows up in DC or Nj when I run it in sandboxie. I did what Cent did and placed the bat file where wget.exe is located, and edited the bat like Lily did. Any other suggestions?

internap dos - July 1, 2014, 12:28 pm

Or you could all just stop being poor and buy a domain lol.

Jinu - July 1, 2014, 12:30 pm

(Jul 1, 2014 12:26 PM)Bamboo321 Wrote: [\[CITE\]](#) I followed the tutorial step by step and nothing shows up in DC or Nj when I run it in sandboxie. I did what Cent did and placed the bat file where wget.exe is located, and edited the bat like Lily did. Any other suggestions?

Don't test the server in your PC. Try anubis or this one:

<https://hackforums.net/showthread.php?tid=4225743>

Nikem.D ? - July 1, 2014, 1:27 pm

Nice Info , Jinu . its appreciated . keep it up .

isrlygud - July 1, 2014, 1:47 pm

Good stuff, I hope this helps a lot of people out.

(Jul 1, 2014 12:30 PM)Jinu Wrote: [\[CITE\]](#) Don't test the server in your PC. Try anubis or this one:

<https://hackforums.net/showthread.php?tid=4225743>

Don't use anubis if your server is crypted. If you use sandboxie to test your server it should be perfectly fine.

MoralsOrSurvival - July 1, 2014, 4:27 pm

[\[IMG=http://www.image-share.com/upload/2610/94m.jpg\]](http://www.image-share.com/upload/2610/94m.jpg)

This is the error i keep getting ;o

Bamboo321 - July 1, 2014, 5:00 pm

Got it to work. If anyone is having trouble try using a VM or another PC in your home. Just because it won't show up on sandboxie doesn't mean it won't run on another box. Now if only no-ip would

come online for at least a minute to do a quick update. One can only dream at this point.

MoralsOrSurvival - July 1, 2014, 5:15 pm

(Jul 1, 2014 05:00 PM)Bamboo321 Wrote: [\[CITE\]](#) Got it to work. If anyone is having trouble try using a VM or another PC in your home. Try navigate to C:\Program Files\GnuWin32 that is the location. If you don't have any thing like that, read the TUT again. Especially no.7.

pota4love - July 2, 2014, 3:25 am

(Jul 1, 2014 07:59 PM)Jinu Wrote: [\[CITE\]](#) Try navigate to C:\Program Files\GnuWin32 that is the location. If you don't have any thing like that, read the TUT again. Especially no.7.

run inside the folder no result nothing

Jinu - July 2, 2014, 3:36 am

(Jul 2, 2014 03:25 AM)pota4love Wrote: [\[CITE\]](#) run inside the folder no result nothing
Actually what error you're getting when you run the .bat file?

pota4love - July 2, 2014, 4:33 am

(Jul 2, 2014 03:36 AM)Jinu Wrote: [\[CITE\]](#) Actually what error you're getting when you run the .bat file?

it just open when i click and disappears within sec,then i open up my rat but cannot see myself effected

lolwutt - July 2, 2014, 4:37 am

Yeah [http://freedns.afraid.org/dynamic/update.php?\(yourprivatekey=\)](http://freedns.afraid.org/dynamic/update.php?(yourprivatekey=)) gives the same error. Am I supposed to input my private key? I tried using my password and username separately and neither worked.

Jinu - July 2, 2014, 4:47 am

(Jul 2, 2014 04:33 AM)pota4love Wrote: [\[CITE\]](#) it just open when i click and disappears within sec,then i open up my rat but cannot see myself effected

That's not a problem. It will disappear in a sec. If RAT not works in your PC, then try it with your friend's PC.

(Jul 2, 2014 04:37 AM)lolwutt Wrote: [\[CITE\]](#) Yeah

[http://freedns.afraid.org/dynamic/update.php?\(yourprivatekey=\)](http://freedns.afraid.org/dynamic/update.php?(yourprivatekey=)) gives the same error. Am I supposed to input my private key? I tried using my password and username separately and neither worked.

You did not follow what I mentioned. Right click on the bat file click "Edit" then copy from "http://" to "=" and paste it in your browser.

pota4love - July 2, 2014, 5:08 am

(Jul 2, 2014 04:47 AM)Jinu Wrote: [\[CITE\]](#) That's not a problem. It will disappear in a sec. If RAT not works in your PC, then try it with your friend's PC.

Change your IP/DNS to your dns name in your RAT while build your server.

poppins89 - July 3, 2014, 4:47 pm

(Jul 3, 2014 09:31 AM)Jinu Wrote: [\[CITE\]](#) Change your IP/DNS to your dns name in your RAT while build your server.

thanks for the advice, but I had already done this thing

In fact, when I look at as property of the server appears my DNS name and port that I set ...

lucyskidmov - July 3, 2014, 5:03 pm

I did this earlier and it worked perfectly in in Win7. However, I just tried doing it in winXP. I noticed in Win7 I had to run the .bat file as administrator to get it to work correctly, but now on WinXP there

isn't an option to right click and run it as an administrator. Anyone got this working on WinXP correctly?

Maybe I'm doing something wrong

patrick1977 - July 4, 2014, 3:49 am

Thank you for the tutorial.

It is working like it should, but within 48 hours they closed my account without even ratting!

hexator - July 4, 2014, 12:39 pm

so guys ^^ my old NO IP Account is deleted i search for alternative and i saw this thread here from a member who make it with freedns.afraid.org i make the same thing like in the tutorial but it not works ... i tested it with update clients ports are open firewall off account clear and stub not crypted and no options moved all files in the right folders and started the bat... ... can anyone help me personal please?

win 7

DC

greetings

TrueStalker - July 5, 2014, 3:10 am

Great tutorial as always when Jinu writes them! Very well explained with pictures and easy to follow, thanks a lot! ?

LordOfChaoz - July 5, 2014, 3:54 am

Great tutorial but i cant get it to work. The bat thing doesnt work. :/ A cmd pops up very fast and i cant see what it says.

AlphaA - July 5, 2014, 6:30 am

Fucking a* tutorial m8 my friend n8 r8 this 8/8 :/

catlover000 - July 5, 2014, 12:33 pm

any chance to change port of our domain like xxxx.chickensth.com:96321 is 1064 default and unchangable?

edit: additionally if we use stable ip is there a need of working bat each time?

Crying Blood - July 5, 2014, 12:37 pm

This sounds good, must look into it more,

Jinu - July 5, 2014, 12:48 pm

(Jul 5, 2014 12:33 PM)catlover000 Wrote: [\[CITE\]](#) any chance to change port of our domain like xxxx.chickensth.com:96321 is 1064 default and unchangable?

Whenever your run the .bat file, It will popup and close. It means, It synced with your current IP and you're good to go.

If your're not sure, whether it's synced or not, edit your .bat file and copy from http:// to the last and paste it in your browser. It will how your current IP.

And I'm not get you what ports you're telling.

catlover000 - July 5, 2014, 12:59 pm

(Jul 5, 2014 12:48 PM)Jinu Wrote: [\[CITE\]](#) Whenever your run the .bat file, It will popup and close. It means, It synced with your current IP and you're good to go.

And I'm not get you what ports you're telling.

for example we were choosing a host and a port on no-ip but we choose only host in here. cant we choose the port we want?

lucyskidmov - July 5, 2014, 2:49 pm

Ok, so i managed to get it to work before on Win7 but now I can't! If anyone could assist me on TeamViewer to get it to work I'd be more than grateful please please. I followed what everyone has said in this thread and i still don't seem to be having any luck. The first time I tried it[win7], it worked flawlessly, now I've tried it on WinXP and Win7 and no luck at all, I just don't understand why this is happneing.

Someone please PM with your details, any assistance would be greatly appreciated.

Cannooo - July 5, 2014, 4:47 pm

A HUUUUUGE thanks!!!

Would give +3rep but I can't do that. ?

highlogic - July 5, 2014, 5:18 pm

Ow very usefully also thanks for the pictures

almightydonglord - July 6, 2014, 1:17 am

nice tut, man. anyone else getting high ping rates on your slaves with this?

hexator - July 6, 2014, 2:52 am

so guys problem solved ! port 1604 is blocked from different domains....

dFxM4RK - July 6, 2014, 3:24 am

Awesome tutorial very helpful thanks dude! :)

splax - July 6, 2014, 8:37 am

thanks for tutorial..

but everytime when I restart PC must run .bat again?

Jinu - July 6, 2014, 10:01 am

(Jul 6, 2014 08:37 AM)splax Wrote: [\[CITE\]](#) thanks for tutorial..

but everytime when I restart PC must run .bat again?

Yes. You need to run it every time.

radiowave - July 7, 2014, 5:39 am

(Jul 6, 2014 10:01 AM)Jinu Wrote: [\[CITE\]](#) Yes. You need to run it every time.
if you use stable ip why do you need bat to work everytime?

splax - July 7, 2014, 9:03 am

(Jul 6, 2014 10:01 AM)Jinu Wrote: [\[CITE\]](#) Yes. You need to run it every time.
thanks for response

hmm my darkcomet slaves are connecting, without run .bat, after restart PC .. maybe i am doing something wrong, but it works .. i am using nvpn.net ...

radiowave - July 7, 2014, 9:15 am

(Jul 7, 2014 09:03 AM)splax Wrote: [\[CITE\]](#) thanks for response

hmm my darkcomet slaves are connecting, without run .bat, after restart PC .. maybe i am doing something wrong, but it works .. i am using nvpn.net ...
that was what i was trying to tell :) if you use a stable ip why should you make bat work ever time? slaves would come to same ip and you would listen same port. nothing would change.

Ken_bob - July 7, 2014, 12:39 pm

If your privates IP changes would you still see those slave.

Jinu - July 8, 2014, 12:02 am

(Jul 7, 2014 12:39 PM)Ken_bob Wrote: [\[CITE\]](#) If your privates IP changes would you still see those slave.

If your private IP changes, you won't get your slaves back.

To prevent that, use this tutorial.

john12 - July 8, 2014, 12:15 am

Thanks for the tutorial mate!Already registered in the site and setup the dns,it works great

kcrich - July 8, 2014, 2:24 am

Hi guy, Can DC get logs From Windows 8 or it only get logs from windows 7? please i need to know
Can i you one DNS in two separate server?

Hopsin - July 8, 2014, 4:28 am

(Jul 7, 2014 12:39 PM)Ken_bob Wrote: [\[CITE\]](#) If your privates IP changes would you still see those slave.

This is why this tutorial is created. You won't lose victims if you use this tutorial!

idramex - July 8, 2014, 4:49 am

i just followed the tutorial and haven't test it yet . Anyone who got vmware or something and want to test it for me . i would be grateful . PM me your skype and i will add you.

also when i open the .bat file and it close less then a second . Should that do it ? like everytime i run my pc i can just run it ? :P sorry for the noobie Questions but i'm new here :D

r00t_z3r0 - July 8, 2014, 1:19 pm

Thank you for this tutorial, I had no idea No-Ip was a bad choice. Very detailed and easy to follow. Great work :)

bounce177 - July 8, 2014, 1:34 pm

this dont work for me ?????

Oliver Sykes - July 8, 2014, 2:20 pm

(Jul 8, 2014 01:34 PM)bounce177 Wrote: [\[CITE\]](#) this dont work for me ?????

What didn't work? Do they not connect? Make sure thee victim has av and fw turned off.

Cannooo - July 9, 2014, 4:32 am

Bumping this thread that people would stop making threads about no-ip and could see this thread everytime they enter 'Remote Administration Tools' section.

catlover000 - July 9, 2014, 5:04 am

i couldnt get what is wrong i did everything right. my port is online, my ip is correctly directed. slaves download and do execute the server but no slaves pops up on my DC (i also deactivate my firewall). if anyone want to help hit me on pm then we can skype and solve the problem :) (i miss my 250+ slaves :()

Jinu - July 9, 2014, 7:06 pm

(Jul 9, 2014 05:04 AM)catlover000 Wrote: [\[CITE\]](#) i couldnt get what is wrong i did everything right. my port is online, my ip is correctly directed. slaves download and do execute the server but no slaves pops up on my DC (i also deactivate my firewall). if anyone want to help hit me on pm then we can skype and solve the problem :) (i miss my 250+ slaves :()

Maybe you used no-ip before. And now this free DNS.

lilalexq22 - July 9, 2014, 8:44 pm

Good tutorial, critical during this time. I tried following it, went through the whole thread and spent my own time trying to fix a problem I'm having. I've followed everything and tries solutions you've given to other but nothing is. working. It all seems fine up until I run the RAT, I don't see anything on my client afterwards. Although it's unlikely you have any since I followed the tutorial to the T, any suggestions? :/

1337 - July 9, 2014, 9:21 pm

Very detailed and HQ tutorial !! :PIRATE:

Sluni - July 10, 2014, 3:47 am

Nice tutorial. I have a question: How do you stop the subdomain pointing to your dynamic IP after you have run the .bat?

For example when using No-IP you could simply exit the DUC client. But with this method there is not even a process in task manager to kill.

I know you could simply restart your PC, but there must be another way to stop the DNS syncing with your IP when you don't need it.

I know you could simply restart your PC, but there must be another way to stop the DNS syncing with your IP when you don't need it.

There is actually. ? Just open up CMD as Administrator and enter this command: "ipconfig /flushdns" followed by this one "ipconfig /registerdns" ?

Eternal. - July 10, 2014, 4:00 pm

Hopefully this helps many people who are still remotely administering computers. Bullshit so many people lost their No-IP.

brad9999 - July 10, 2014, 4:04 pm

yes??????????

SIM-2327840 - July 12, 2014, 6:58 am

Hey. is a problem if i have my Dark Comet in a usb and sometimes i log out the usb? That maybe make slaves get deleted or my server not more working? Also there is a problem if my router get turned off anytime?

5 Cents - July 12, 2014, 8:03 am

Ok I have a problem, but I'm not sure if it's a problem or not.

Basically I tested no-ip on myself, and run it through sandboxie when I built my stub via Darkcomet. I execute it on myself via sandboxie and I will appear on my remote administration tool.

When I follow this tutorial, I do the exact same steps but with freeDNS on. I've run the wget scripts and install W-get on my PC. And run it. Yet I do not follow up on my remote administration tool?

So what I'm trying to say is, will my remote administration tool still work if I test it on another PC (Because it doesn't work on myself), with a different network, and FreeDNS working at the same time. Or will it just not work for me, and everyone else.

niemamnicku - July 12, 2014, 8:25 am

its working with ProXPN? I have big problem becaouse my admin blok my all ports and i can't config any rats

Disgusting - July 15, 2014, 8:13 am

Mine is currently not working. I've opened my ports and done exactly as the guide but when i try it on my laptop it still doesnt show up..

RAZEREYE - July 15, 2014, 8:45 am

thankss. this is very helpfull. im gonna save this...

jollyrogers - July 15, 2014, 11:46 am

Jinu,quality thread ,i'm now back up and running ,works perfect people ,just follow the instructions, thanks again jinu

Hey! guys i need link to download DarkComet rat v5.3.1
legitimate link pls

samsonite666 - August 3, 2014, 1:30 pm

awesome thread many thanks for this OP

will use this at a later date for my rats ;)

virgin.money - August 8, 2014, 9:36 am

Thanks a bunch man. I'm enjoying this forum. So much resources available at affordable rates.

fitzmargi - August 12, 2014, 11:09 am

Humm i do exactly the same and it's not working for me.

I'm using Jspy.

If someone can help from skype and teamviewer that will be a pleasure . . .
thanx for the tuto dude.

loveislove - August 14, 2014, 4:27 pm

i use <http://www.freedns.afraid.org> i make this and use it after created this and make stub by putting dns my stub didnt work on my pc and when i creat stub on 127.0.0.1 its work on my pc my simple question is that is dns must need for making stub ? and can my stub work on other pc if i didnt use dns and make stub ok 127.0.0.1 ??

solve my problem come in my pc plz arsh.khan.01 my skype

mercury74 - August 15, 2014, 11:30 am

Mine didn't work at first. The reason why is because I did not put my .bat file in C:Program Files > GnuWin32 > bin

Everything works fine now.

Also, edit your .bat file and on the last line type: pause

The CMD window will stay open and you will see if it is running, or if there are any errors.

john540 - August 16, 2014, 6:06 am

which a rat do you use in this thread

Saduto - August 16, 2014, 6:16 am

Great Tutorial always HQ! ?

degado - August 16, 2014, 8:52 am

why it would be jinuhftut.chickenkiller.com:1604

what the numbers mean after : is it the port number?

and where I locate the the .bat file I mean should I paste in the program directory or I can have anywhere?

ramiz123 - August 16, 2014, 12:08 pm

So if you were using a vpn, how would you do it? Connect to the vpn first, create a domain and stuff and download the bat and run it then put it in DC?

Jinu - August 25, 2014, 2:37 am

(Aug 16, 2014 06:06 AM)john540 Wrote: [\[CITE\]](#) which a rat do you use in this threadDarkcomet

1604 is port.

You can have the .bat file anywhere.

(Aug 16, 2014 12:08 PM)ramiz123 Wrote: [\[CITE\]](#) So if you were using a vpn, how would you do it? Connect to the vpn first, create a domain and stuff and download the bat and run it then put it in DC?

That's your wish. When you run the .bat file, it will sync'd with your current IP that maybe either your own IP or VPN IP. Which is available at that moment.

anonzero - August 25, 2014, 5:42 am

Awesome tutorial mate thank you man

franzl - August 25, 2014, 5:49 am

Thanks a lot for this great tutorial. ?

Anodise - August 25, 2014, 3:15 pm

Thank you so much for this. This is so much more convenient than No-IP

BouseSauce - August 26, 2014, 1:38 am

Cheers mate! This was all incredible and damn useful, Going to be checking out yo other posts now

Explain your error. What actually you did.

Happy Nerd - September 7, 2014, 9:45 am

Have the same problem and I did everything the guide told me to do, but i had to start the .bat as admin also windows was telling me i shouldnt open it may there is a firewall ?

Jinu - September 7, 2014, 9:52 am

(Sep 7, 2014 09:45 AM)Happy Nerd Wrote: [\[CITE\]](#) Have the same problem and I did everything the guide told me to do, but i had to start the .bat as admin also windows was telling me i shouldnt open it may there is a firewall ?

If you can, take a screenshot of that windows error and send. Still I do not understand.

Happy Nerd - September 7, 2014, 9:58 am

Well it was more a security check so no worry about this i guess, but it still tells me " Error: Address xxxxxx has not changed.

After i ran the .bat may i should re-install everything again

Mudge - September 7, 2014, 10:12 am

Great tut man, will help people out moving over from no-ip.

? **Soufian** ? - September 7, 2014, 11:03 am

I started the bat.

Then went to the link, and it says the following "ERROR: Address xxx.xxx.xxx.xxx has not changed."

(Replaced my IP with xxx)

Anyone knows if this is a good sign?

Happy Nerd - September 7, 2014, 11:04 am

Thats no good sign , you have the same problem as I have... dont know how to fix it either..

? **Soufian** ? - September 7, 2014, 11:06 am

Portforwarding is not needed for this method i guess, right?

Happy Nerd - September 7, 2014, 11:07 am

Nope dont think so otherwise it would be in the TUT here i guess

Jinu - September 7, 2014, 11:08 am

(Sep 7, 2014 11:08 AM)Jinu Wrote: [\[CITE\]](#) Went to which link? Why are you not elaborating?

Went to this link:

<http://freedns.afraid.org/dynamic/update.php?<PRIVATE KEY>>

I don't have a dynamic IP by the way, it's just 1 IP address, once my modem restarts, i still have the same IP. Might that be the cause?

iKick - September 7, 2014, 11:46 am

That is just the Direct URL to update your DNS to your current address.

The error you got means the DNS is already pointed to your current IP Address and means the DNS should be working.

If you have any more questions don't hesitate to ask ?

eliteplague - September 7, 2014, 3:49 pm

he is right.

you can test it by changing your IP address in sub domain to something else, it will automatically revert it to make your dns work.

Also I don't understand why wget is necessary, I can run the bat files without it.

EnTerPlays - September 7, 2014, 5:22 pm

<https://gyazo.com/c75c65ce34110aa673cefc7e7d9df958>

lakhaliil - September 28, 2014, 8:17 am

oh thats awesome no-ip deactivated my account

.BangsOnly - September 29, 2014, 8:15 pm

Heys, i need some help please. I followed through with the whole tutorial redid everything over and over, read from page 1-17 and i think its somewhat working because i tested it by making a rat with DC with the Dns "blahblahblah.ignorelist.com" and ive made sure to check that it is directed to my IP, and ive tested it by running the server(stub,rat) on my own pc (note that this rat is using the 'blahblahblah.ignorelist.com dns and NOT my ip because thats the only thing its connecting to and im sure) and luckily my own computer popped up on my DC. So it DOES work... BUT now i wanted to test it on another computer OUTSIDE of my own network, i decide to send the server(stub,rat) over to a slave and i ran it on his computer and it never connected to me..... So my theory is that something is blocking outside connections?? anyone have anyidea?

Thanks in advance HF

?eumonic - September 29, 2014, 8:37 pm

Glad I found this thread! If anyone uses NanoCore (and I'll try supporting ImminentMonitor3 soon), be sure to check out my plugin. It's a No-IP/FreeDNS/DynDNS Dynamic Update Client. Saves you the hassle of having to run that .bat file every once in a while.

joeing777 - October 2, 2014, 8:07 pm

Once you have run your .bat, right click and edit it. It will show you a link similar to the one beneath you just copy that and check in your browser

[http://freedns.afraid.org/dynamic/update.php?\(your](http://freedns.afraid.org/dynamic/update.php?(your) private key will be here without brackets).

I have run the .bat. I cant see it anywhere to right click and edit, someone please help

Dribbles - October 3, 2014, 10:48 pm

These are perfectly normal responses from the FreeDNS server. It is just saying that your IP address did not change from update to update and, as a result, it doesn't need to do any DNS updating.

vanphi89 - October 24, 2014, 10:27 am

thank you. best tutorial for understand

(Nov 30, 2014 02:38 AM)samote152 Wrote: [\[CITE\]](#) Hi i have this erro

ERROR: Address has not changed.

:(

Anyone who is getting the message "ERROR: Address <your ip here> has not changed." is doing it correctly. That is a good message response from FreeDNS. It means that your old IP and new IP are the same IP and it does not need to change anything on it's end. There is not a problem.

I'm using wget 1.16 because 1.11.4 is from 2008. it's working fine guys, here do you have url (sorry i cant put links because 50 posts requirement):

eternallybored.org/misc/wget

replace old wget.exe from GNUWin32/bin by this one.

MonTarLo - December 12, 2014, 6:26 am

See your above post.

Code Because your IP is already synchronized, open cmd and type "ping your_dns_address"

?dyss?us - December 16, 2014, 6:13 am

Very nice TUT but i have used it before it didn't work for me don't no why

?dyss?us - December 17, 2014, 7:14 am

Ok Lalit Agarwal Thanks i will give it a try again later

Nobody91 - December 19, 2014, 9:35 pm

if i make a stub with 127.0.0.1 it works, but if i put my ip or some dns it doesnt... why?

Nobody91 - December 19, 2014, 10:00 pm

yes my dns is synchronized with my ip, all firewall and avira off. i tryed all free dns but nothing, using dc. port in listen good also. i've the process in the task manager, is the connection that dont work...

marda417 - December 20, 2014, 2:35 am

Hey guys so i've read through this thread and i've got an issue,

I run the .bat file but when i run it and go to the link it says error adress xxx.xxx.xxx.xxx has not changed,

I then go to ping the dns ping xxxxx.mooo.com and no luck, doesn't ping request times out :(

can anyone lend a helping hand?

Anodise - December 20, 2014, 2:39 am

There's no issue. It means that your IP is synced with the DNS and should be working.

marda417 - December 20, 2014, 3:01 am

(Dec 20, 2014 03:39 AM)?endetta Wrote: [\[CITE\]](#) There's no issue. It means that your IP is synced with the DNS and should be working.

hmmm, DC must not work for some other reason then :S, oh well i'll work it out

THANKS!

splax - December 24, 2014, 4:07 am

I am using freedns.afraid.org 6 months with darkcommet .. but today when I open freedns.afraid.org my subdomain is missing :(and I cant create similar subdomain :(.. I lost all my slaves ..

I had max. 8 slaves online

Someone same problem? :(

HFblackhats - December 29, 2014, 9:37 pm

AHHH thank you so much this helped me out a tun A+++

SIM-1980240 - January 1, 2015, 10:16 pm

I followed the tutorial and it worked perfectly. Was very simple and easy to do thanks for the great alternative to no-ip!

E3FN - January 4, 2015, 3:07 pm

dude you are the best! I'm way too serious.

John03 - January 5, 2015, 1:51 pm

wow thanks so much for this nice work

LDK159 - February 15, 2015, 5:39 am

Awesome tutiorial, nice work. Thank you !!!

lapiska44 - February 15, 2015, 5:31 pm

Nice tutorial. Thank you for this bro. Good Alternative

DezzOmar - February 17, 2015, 1:14 pm

When i go to the link i got from the .bat file it says ERROR: Adress (myipadress) has not changed. anyone know what to do?

biscuit deluxe - February 17, 2015, 1:17 pm

So a DNS masks your IP so slaves cannot see it?

Jinu - February 18, 2015, 12:33 am

(Feb 17, 2015 02:14 PM)DezzOmar Wrote: [\[CITE\]](#) When i go to the link i got from the .bat file it says ERROR: Adress (myipadress) has not changed. anyone know what to do?

It is because your IP is already synchronized, open cmd and type "ping (your_freedns_address)"

*Replace the bracket with your freeDNS address.

GhostintheShock - February 18, 2015, 4:09 am

One of the best and it will surely works for me because I do have a router issue.

Thanks for sharing.

zepsuta - February 20, 2015, 12:38 pm

As a noob, this was really easy to follow and very thorough! Thanks!

w3areanonymous - March 9, 2015, 3:02 pm

Great Tutorial , this was really helpful.

papuska99 - March 11, 2015, 10:00 am

Nice Info , Jinu . its appreciated . keep it up.. .

rlugo29 - March 11, 2015, 9:21 pm

Great TUT!!!! Props to the OP. Very easily understood the first time. And this was my first time.

FrickingHecker - March 21, 2015, 8:27 am

when I go the the page with to check if it is working it says ERROR: Address (My IP) has not changed.

FrickingHecker - March 21, 2015, 9:11 am

(Mar 21, 2015 08:58 AM)Lalit Agarwal Wrote: [\[CITE\]](#) Means it is already sync to your current IP.

Does that mean that it is say to use in my rat?

fgoldberg - March 22, 2015, 7:22 pm

Thanks a lot Jinu, very good Tutorial!

mr_boss - March 25, 2015, 1:08 pm

I keep getting this :

"ERROR: Address (my IP Adress here) has not changed." ???

Ferrell - March 25, 2015, 2:50 pm

It's the tutorial i was looking for, i'm just starting using a rat will use this one. thanks a lot

Paranohack - March 26, 2015, 9:44 am

Thanks you. I was using no-ip previously because thats what a lot of tutos tell you but Imma give a try to freeDNS

BlackLayer - April 12, 2015, 7:38 am

I understood perfectly your OP tutorial and explain, thanks you ?

Nywma - April 13, 2015, 12:45 pm

lol been waiting 2 hours for the activation mail, been trying with 2 diffrent emails now. Whats wrong?

ecclesiaste1er - April 13, 2015, 6:26 pm

good job bro,think for this,it is very important

sophiealexandrine - May 1, 2015, 12:08 pm

ERROR: Address 123.456.7.890 has not changed.

when i am pasting link to browser only this is coming...
how can i resolve this issue bhai?

sophiealexandrine - May 2, 2015, 12:20 am

(May 1, 2015 07:29 PM)Joker™ Wrote: [\[CITE\]](#) This means IP is already sync'ed.
You are good to go.
Thanks a lot bhai.
Love you Bro.

flame7651 - May 2, 2015, 3:03 am

thanks for the tut! will try this :)

Benito - May 3, 2015, 10:37 pm

very good tutorial brother.
Thanks

Primaal - May 20, 2015, 9:29 am

Posting to check back later when needed, thanks alot.

noimee2 - June 25, 2015, 2:09 pm

Thanks for this.. good tutorial...wanna use it

Charlie666 - July 21, 2015, 6:30 am

My NO-IP recently got banned so turned to this and working great, thanks!

Decipher™ - July 21, 2015, 11:06 am

Wow dude Nice TuT Should help Some Members

Acquire Zion - July 25, 2015, 11:38 am

Really appreciate the tutorial man, but I dont think I installed wget correctly?

When i run the .bat file I get the error:

'wget' is not recognized as an internal or external command, operable program or batch file.

How can I resolve this?

Jinu - July 25, 2015, 7:57 pm

(Jul 25, 2015 11:38 AM)Acquire Zion Wrote: [\[CITE\]](#) Really appreciate the tutorial man, but I dont think I installed wget correctly?

How can I resolve this?

Move the .bat to the installer folder and try again.

Any other problem, refer here.

TheEclipse - July 26, 2015, 11:29 pm

Helpful post, Much appreciated!?

achambo - July 27, 2015, 12:23 pm

Thank you for this tutorial. It is definitely helpful

Zigggy - July 31, 2015, 12:14 pm

when i put the .bat link into the browser it shows ERROR: ip address xxx xxx xxx xxx has now changed.

Jinu - July 31, 2015, 7:24 pm

(Jul 31, 2015 12:14 PM)FLVCKO Wrote: [\[CITE\]](#) when i put the .bat link into the browser it shows ERROR: ip address xxx xxx xxx xxx has now changed.

IP address has NOT changed or NOW changed?

NetworkSilence - July 31, 2015, 11:21 pm

Just skimmed over this but I'll be coming back here once I get my RAT going

Jinu - August 4, 2015, 10:46 am

(Aug 4, 2015 10:42 AM)No One™ Wrote: [\[CITE\]](#) Let more newbies see this, thanks bro.

Hope you get RAT Expert award.

I owe you buddy, you helped me a lot.

rwj2010 - October 15, 2015, 1:23 pm

Very well done...easy to follow.

Thank you.

Yakz - December 20, 2015, 6:24 am

Great thread, easy to follow.

bipi - December 20, 2015, 12:51 pm

FreeDNS is a Honeypot...i think

Pe?cil - December 21, 2015, 1:42 pm

Hi

I saw FreeDNS is not anymore interesting for DNS service.

Since FishDNS is suspended I'm thinking about FreeDNS, but I don't know.. I'm not planning to spread my stuff, I'll have only 1 connection through the DNS (for 1 people so), with a private encryption/stub. So even if the md5 of my file is rare (@reputation) no AV will detect it.

Does FreeDNS is still bad for my situation ?

john.corner143k - January 13, 2016, 2:07 pm

hey I am using a VPN and i get an error like this

"The IP 213.183.56.124 was found on a blacklist - please contact an administrator if you believe this is in error"

can any one help me out..

skarabeusz94 - January 14, 2016, 12:26 pm

Don't use this DNS since it's not legitimate. You got blocked and you lost your clients probably. Could anyone close and remove this thread?

Metalgear92 - August 28, 2016, 10:16 am

Just noticed the age of this thread

Mr.Dark - August 28, 2016, 2:05 pm

Great idea and amazing Tut.

xtommyxnguyenx - January 25, 2017, 6:44 am

Thankyou so much for this!!!!!!!

Byte-ul - January 25, 2017, 9:55 am

Thanks man, very helpful.

Mika9931 - February 7, 2017, 9:09 am

Keep getting : Error adress is not changed.

Even after the solution

FeeliNx - February 28, 2017, 7:45 am

Dont trust freedns.afraid.com.. not worth it...my dns got freezed and lost all my clients!

you can check the thread i have made about it:

<https://hackforums.net/showthread.php?tid=5562758>

bavenavav - February 18, 2018, 7:30 am

ERROR comes to me: Address has not changed.

ghostzone - July 11, 2018, 8:14 am

nice tutorial and very educative bro

SIM-3933056 - June 23, 2019, 9:35 am

ERROR: Address 141.255.158.122 has not changed.

what i did wrong?

(Feb 18, 2018 08:30 AM)bavenavav Wrote: [\[CITE\]](#) ERROR comes to me: Address has not changed.

same problem

jonathanwh - June 2, 2020, 7:08 pm

I keep getting this error:

ERROR: Address <IP> has not changed.

D3ath_GuN - *April 17, 2024, 8:13 pm*

I followed all the steps with freedns. But when I run my subt.exe it cannot connect with the server.
