Thread: [Clicking a button with no ID?](#)

Drizzy?? - May 27, 2014, 6:10 pm

I'm trying to click a button on a webpage, but there is no ID so I can't exactly identify it:

Here is the inspect element:

```
<button title="Show Lat Long converted address on Map" onclick="showlatlong();">Convert to Address</button>
```

If you want the website, here it is:

<http://www.latlong.net/Show-Latitude-Longitude.html>

I'm trying to click the "Convert to Address" button using the webbrowser control. Thanks. ?

Try:

```
Code webbrowser1.Document.GetElementsByTagName("button")
```

LordCoder - May 28, 2014, 2:17 am

```
Code For Each elm As HtmlElement In webBrowser1.Document.All
```

```
    If elm.GetAttribute("title") = "Show Lat Long converted address on Map" Then
```

```
        elm.InvokeMember("click")
```

```
    End If
```

```
Next
```
