Thread: [Buyer's Guide - Hardware? ~ 2k Budget](#)

hans_meier - May 28, 2014, 2:13 pm

Hey, got a nice payout coming in the next few weeks so I decided, I'll upgrade my gaming & afkbotting PC.

Needed:

GPU(s): Got the GTX 770 Jetstream from Palit running, which doesn't give me W_D with Ultra settings ... so she gotta go.

RAM: 16 GB are not enough for the amount of VM I want to run at my machine, so it'll have to be 32GB.

PSU: 550W from bequiet might not be sufficient I guess? :D

Mainboard: a new one (maybe with i7 4xxx support?)

CPU: -----^

CPU Cooling: Is mine sufficient? (See below)

1 or 2 monitors with maybe 120Hz and a nice resolution (to be considered with the new GPU)

My System:

CPU: i7 3770

CPU Kühler: Thermalright HR-02 Macho Rev.A (BW) Tower Kühler

RAM: 16GB 1600MHz

GPU: nVidia GeForce 770 Jetstream (Palit)

PSU: 550W bequiet Gold

Monitor: Samsung S24B350H

Mainboard: AsRock H77 Pro4/MVP

What hardware would you suggest?
(excuse my bad english :l)

What is your budget you have available to upgrade your PC?

hans_meier - May 28, 2014, 2:22 pm

hmm around 1-2k€ (Germany is expensive with hardware :x)

Oh yeah got a Asus Xonar STX already, so no need for a motherboard with "excellent sound" and shit (maybe WLAN though).

Think I'm going to go for:

3072MB Inno3D GeForce GTX 780 Ti iChill

760 Watt Corsair AXi Series Modular 80+

32GB Corsair Vengeance Pro Series silve

Zalman Reserator 3 Max

27" (68,58cm) LG Electronics Flatron

Any comment about that?

<http://pcpartpicker.com/p/nv4c4D>

Can't find the GPU there though :x
