Thread: [Good DDoS systems](#)

TheCatsMeow - May 30, 2014, 7:42 am

Hello everyone, I am fairly new to hacking, and I wanted to know what booting software you use, if you could tell me websites that are good and which are bad, money isn't an issue. Thank you guys.

Dafuq™ - May 30, 2014, 7:46 am

You have to have spoofed servers 1st. then you have to have scripts for your different methods. There are no reputable hosts left that will allow spoofing or scanning any more. I'm actually a business partner with the only place I know thats gonna allow it anymore and I'm currently making an entire new network of spoof only servers that wont be taken down.

Shedletsky - May 30, 2014, 7:47 am

I used R37FT Booter, not the greatest but it gets the job done.

API-Down - May 30, 2014, 10:00 am

I guess you are asking wich booter is the best?

Well i must say that Betaboot has worked well for me.

TheCatsMeow - May 30, 2014, 10:35 am

I'm just looking for an easy to use stresser that is also good.

Yelsdnah - May 30, 2014, 10:36 am

www.freestresser.com

I would recommend this;

Skype : ichrist2hc

Thank you so much. This one works very good.

Sib3r - May 30, 2014, 8:13 pm

Feel free to take a look at mine mate.

Pepe goes REEEEEEEEEEEEEEEEE - May 31, 2014, 3:16 am

If you want your own dedicated power, buy a spoofing dedi or VPS and scan a DNS list. and hit like 4-5 gigs on a 100mbit or like 15 on a 1gig.

Project Null - May 31, 2014, 3:21 am

Just buy your own VPS and have unlimited boot time!

Have fun.

Walkingd3ad - *May 31, 2014, 3:23 am*

Add me on skype revcrew.best , and i can sell you putty booter.
