Thread: [\[Tutorial\] How to Null Websites For Free](#)[\[Tutorial\]](#)

Project Null - May 31, 2014, 3:10 am

Alright, Here is tutorial written by me. How to Null websites for free. You can't obviously take down big sites, But some small/mid sites should be fine.

I have made this fair simple. Just follow the steps below.

1. Find a target.
 2. Resolve the website IP: <http://exonapps.nl/cfresolver/>
 3. Got IP? Go to <http://ip-tracker.org> and paste the IP
 4. If the ISP says "Cloudflare" then you can't do shit. If it doesn't show up as cloudflare you are good to go.
 5. Download Jindling and run it on vps. link: <http://www.spiritsoft.cn/reload.html?q=jingling> pass = 123456
 6. Put the website adress on it and let it run for up to 12 hours. Your target is receiving shit tons of junk traffic and the CPU will most likely die.
- Hope i have written everything clear enough. If you have any questions regarding this, Feel free to ask!

Here is english translate of the tool:

PM me please i need a word with you!

swagster1337 - June 1, 2014, 8:02 am

This probably works, but every site i tried said Cloudfare so it doesn't work for me :(

Fatboii - June 1, 2014, 8:30 am

Thanks really needed a tutorial on that program i have it but i can't use it because of the language.

PVPERCHVSER - June 1, 2014, 8:53 am

Appreciate this tutorial will be trying this out!

Asuna ? - June 1, 2014, 10:32 am

Can someone confirm that this works ?
