Thread: [rProxy | Reverse Proxy | No portforward | HTTP Panel](#)

Alan Turing - May 31, 2014, 8:07 am

What is it?

rProxy allows you to turn any computer in proxy server (only SOCKS 5 atm, but more options are coming) without port forwarding! You don't need to be a master network expert to use it : a user-friendly HTTP panel is provided.

Features

- Transparent reverse proxy (no portforward needed)
- Silent (no window)
- No dependency (coded in C++)
- User-Friendly HTTP panel
- Secure connection : your server is between you and the proxy computer
- Startup autorun
- Full support

Screenshot

[img]http://img11.hostingpics.net/pics/189455rproxy.png[/img]

Advice needed

- Are you interested?
- What features can I add?
- How much can I sell it?

kolec94 - June 3, 2014, 6:06 pm

i am interested and you if could add bitcoin payment system and possibly auto switch proxy every 10 minutes ex.

Alan Turing - June 4, 2014, 3:50 am

Yes, you will be able to purchase via BTC and I can add this feature too. ;)

Six-Nine - June 4, 2014, 5:11 am

Aha so this was the thing lol. The "smartest" idea ever!

Cakeb\$\$\$ - June 4, 2014, 5:17 am

Pretty fucking smart if you ask me.

To op.

This is a great idea for a program and if it is easy too use i'm guessing you would be able to get a lot of users. Only thing i doubt is if you will be able too sell it. I would recommend doing a nice free version and include some cool extras that aren't needed to function but really makes ease of use

better for the premium version customers.

No, no I have never heard about that before.

Cakeb\$\$\$ - June 4, 2014, 5:26 am

(Jun 4, 2014 05:21 AM)Six-Nine Wrote: [\[CITE\]](#) A socks proxy.. No, no I have never heard about that before.

Simple setup

Webpanel

Windows based

No deps

Just run and forget

No portforwarding

I would say i have seen nothing as good as this out yet aslong as it delviers what's promised. If you know any please show me because i would love one ?

This has nothing to do with my other project O.o'.

Six-Nine - June 4, 2014, 5:54 am

The other thing was something proxy realted too.

Six-Nine - June 4, 2014, 3:15 pm

(Jun 4, 2014 03:01 PM)Sabre Wrote: [\[CITE\]](#) Wait so this isn't the thing from the port forward bypass thread? Yes it is. I don't know why he denied it.

Examplesze - June 4, 2014, 3:31 pm

Yes this would be a quite useful tool, Release for free and make it so you can buy extra features and it will blow up

f1sh - June 5, 2014, 7:10 am

This looks strikingly similar to RPCC. :\

qwerty101 - June 5, 2014, 7:24 am

Looks really good man, I'd be interested.

kolec94 - June 5, 2014, 9:03 am

u could sell this for \$400 if u know where to sell it at

Six-Nine - June 5, 2014, 9:04 am

(Jun 5, 2014 09:03 AM)kolec94 Wrote: [\[CITE\]](#) u could sell this for \$400 if u know where to sell it at No he cant.. Its like a normal proxy.???

kolec94 - June 5, 2014, 9:15 am

(Jun 5, 2014 09:04 AM)Six-Nine Wrote: [\[CITE\]](#) No he cant.. Its like a normal proxy.???
what do u mean reverse socks plugins for smoke is \$700, atrax reversesocks5 plugin sells for \$400

Trival - June 5, 2014, 10:18 am

Add a userkit or some basic persistence.

Auto switch proxy every xx minutes seems like a good deal...

Price : Not lower than 300\$

Payment Methods : Whatever you do no PayPal/Payza/Skrill and stuff like that!

And try to keep userbase small.

Good Luck with this and if you need someone to beta test, let me know :)

(Jun 5, 2014 09:15 AM)kolec94 Wrote: [\[CITE\]](#) what do u mean reverse socks plugins for smoke is \$700, atrax reversesocks5 plugin sells for \$400
If you'd notice this is better than reverse socks.

WACKO - June 5, 2014, 7:32 pm

This looks amazing. What's the current bin size?

f1sh - June 5, 2014, 8:42 pm

(Jun 5, 2014 10:18 AM)The Gamer Wrote: [\[CITE\]](#) If you'd notice this is better than reverse socks.
What? ? If you'd notice, this is exactly like those plugins.

(Jun 5, 2014 09:04 AM)Six-Nine Wrote: [\[CITE\]](#) No he cant.. Its like a normal proxy.???

I don't think either of you understand what this is, this is an http bot specifically made to use bots as proxies just like Netwire has, for example.

I don't think either of you understand what this is, this is an http bot specifically made to use bots as

proxies just like Netwire has, for example.

According to my knowledge you have to portforward for the bot to connect to you and then use it - this is called reverse socks.

What happening here is Your bot connects to C&C and you connect to C&C, you're always in the shadows :)

saqr2 - June 17, 2014, 7:41 pm

I am interested please pm me if its available for sale!..

Dont go much with features , the most important thing as this bot should fast and secure

Alan Turing - July 7, 2014, 2:56 pm

Thanks everyone for your interest.

rProxy is now available in beta, more info here :

<https://hackforums.net/showthread.php?tid=4318577>

A development thread will be open soon.
