In order to make a link to a "pretyped" PM you need to just call the names of the textareas and add them at the end of the URL with the string values you desire.

Here is an example :

<https://hackforums.net/private.php?action=send&subject=n3y4k0&message=wow%20thank%20you%20so%20much>

If you need further help or details, please let me know.
