Thread: [How to: take down mybb + cloudflare websites](#)

?????? ???? - June 4, 2014, 4:53 pm

Using siege to take down websites with cloudflare + mybb

Things you will need

Linux Box

Siege

Installing siege

First, run these commands to update your machine

Code `sudo apt-get update && sudo apt-get upgrade`

Then we are going to install siege with

Code `sudo apt-get install siege` Now that we have siege installed we can issue our denial of service exploit

Using siege To use siege we will run the command

Code `siege -c 200 sithere.net`

This tells siege to use a concurrent attack method of 200 users. This bypasses cloudflare and really hurts mybb

Results

You don't need a big machine at all to do this, i did this from my home computer. if successful you should knock sithere.net and it will show this page

I've cached this tutorial for personal use but I have a feeling it will be taken down quickly as Omni doesn't like people posting exploits against MyBB for obvious reasons.

~Arcane ?

?????? ???? - June 4, 2014, 8:41 pm

Already talked to omni, his firewall has protection against this one. I wouldn't post something potentially dangerous to hf without consulting him first.

[sena@kobayakawa ~]\$ `siege -c 200 vip'hackforums.net`
>

nothing happend lol

Effexion - June 5, 2014, 2:27 am

Very nice. I shall try this later. Many thanks for the tut.

I hope to God you removed the ' between vip and hf when you tried it.

w34k - June 5, 2014, 8:21 am

Siege is already installed in Kali Linux under Stress Testing>Network Stress Testing. It works on other sites too, don't have to be MyBB or CloudFail. I used it a while back.

change the website you are using for the example or this thread will be junked because that website is not allowed to be said anywhere on this forum.

Nice tutorial though. ?

Nice tutorial though. ?

What if i crossed out the name?

And even if it's the target it's not allowed?

And even if it's the target it's not allowed?

if you delete the name then sure, black it out on the image too but you cannot advertise that forum here at all.. even in a tutorial.

Alright, i thought it would be ok, because it's not advertising. In fact it's showing how to take it down. Will edit it when i get home.
