I run a pretty damn good dedicated server from OVH. Clients hosted on it gets FTP access, PHPMyAdmin access, and a lot of space. I charge \$5 for every 2 websites hosted on it.

* I like to use Bitbucket (Git) for my clients so we have source control and better code management. Websites are updated automatically after every website change. No charge to you.

8bits just finished my website for me, and I'm beyond happy with the results. I didn't know what I wanted, so we started with a concept design. He's very creative and has a deep understanding for the necessary elements specific sites might need. After we agreed on pricing, he got to work promptly on implementing the code, and I could not be more impressed. He went above and beyond adding extras and explaining things I had questions about, and he was always willing to make any changes I wanted. Also, I received quotes from other designers, and he was by far the cheapest. Highly recommended, you won't be disappointed.

HUGE vouch for 8bits. He is the man. Did some great work for me on very slim notice, and was helping me out a ton throughout the entire process. Super reasonably priced too. Go to this guy for any of your needs.

Talented developer, got my site done very well. He was patient enough to make sure everything was 100% and setup the server and the CloudFlare. Will be buying more sites from you in the future!
