I am wanting to buy a laser pointer.

I dont want to spend to much.

I dont want to burn shit, although that would be nice.

I want it to shoot far and bright.

Any link are helpful.

\$10 on ebay. The green laser pointer from past experience excels what I thought for the price.

Bought this a few months ago. Works great for \$10, there's a clearly visible beam at night and indoors during the day. Beam is focusable and it comes with a charger for the rechargeable battery. It's strong enough to get you in trouble if you point it at airplanes for sure :p
