Thread: [Just installed windows 7 ultimate 64 bit](#)

-?MW- - June 6, 2014, 9:57 am

So I just did a fresh clean install of windows 7 and even with an Ethernet cable plugged in it still won't connect to the internet which means I can get any of my drivers. I don't know why this is happening but if someone could help me out that would be awesome!

Motherboard: ASUS B85M-E/CSM

CPU: Intel Core i5 4430

RAM: 8GB

If you need any other info just tell me.

You have to go grab them from another computer or your cellphone, then transfer them on your computer and install them.

Give me 2 seconds to grab your drivers.

Edit : Your drivers :

You need to get the Ethernet driver from the Manufacturer's website and put it on a flash drive and install it so you can get all of those drivers.

Thank you for the help, I couldn't find my drivers but hopefully you can!

Make use of your driver CD that came in your motherboards box.

Then update it online.

Download that and transfer the file to you USB drive, Phone or any other devices that you can store things on and install the driver.

(This is not the driver meant for your MOBA but i think it will work with your MOBA.

OP, I edited my post with the official drivers for your LAN Controller, coming directly from the drivers section of your motherboard. Let me know how it goes !

No problem buddy ! ?

If you need anymore drivers for your new Windows 7 installation, just drop me a PM ! ?
