Thread: [need some help with DarkComet plz plz plz](#)

Tdot87 - June 6, 2014, 1:50 pm

hello people of hackforums so today i am here to ask you for a little help dont worry not too much :) i know this takes time out of your day to reply to people like me. basicly .. i just need to know a few things.

- A. is it best to use a VPN or VPS (sounds silly but im sure ppl make this mistake)
- B. can i keep this on a pen drive for removal if i need to.
- C. how to make sure im 100% safe i know this kinda comes under the VPN VPS side but tips can always help.
- D. an easy way to spread SAFE !

i hope people reply to this as it will help not just me but other people on here to that are new to RATS

thanks in advance for taking the time to read this and if you replied thank you so much :)

Betty Blue - June 6, 2014, 1:54 pm

- A. Whichever you prefer. Just make sure there is no logs.
- B. Keep the whole program or the RAT?
- C. Use a VPN that doesn't keep logs, don't use your personal accounts for anything to do with the RAT.
- D. Torrents, youtube, be creative. The best way is the on you find yourself. (You will here that a lot.)

thank you for your reply ! its much appreciated !
and i meant the whole program if i move it to a pen drive will it ruin the program and (what i have done on it) or will it all stay intact

Brado - June 6, 2014, 4:00 pm

- A. is it best to use a VPN or VPS (sounds silly but im sure ppl make this mistake)
You can use both.. I advice to use a VPN. (Indeed without saving any logs!)
- B. can i keep this on a pen drive for removal if i need to.
You mean.. if you put your whole RAT tool on a USB and put it on a other computer, that you hold your slaves? No. You will lose them, cause it's a new connection.
- C. how to make sure im 100% safe i know this kinda comes under the VPN VPS side but tips can always help.

Use a VPN which is not saving any logs! And never use any names or emails which are also for your personal life! It's also not smart to tell everyone that you hack people.. Hold it for yourself and don't spread it (What i said before) on facebook or whatever!

D. an easy way to spread SAFE !

There are a lot of spreading tut's on HF! Look below I have picked a few for you!

Few Spreading Tut's!

You can never be 100% safe on the internet. There is always a chance you could get caught but obviously a VPN is going to help but don't think you can go around Ratting people and there isn't a chance in the world you won't get caught.
