Thread: [\[TuT\]How To Use Google & Optimize Google Search Results...](#)

ohytheng - January 2, 2009, 5:44 am

Google is the best search engine.

We can obtain many information from Google.

Many people in this forum need to learn how to use Google for 100%.

It is great to know how to use Google.

If we know the way to search Google,we can get a lot of valuable information.

Some of the information maybe can assist us to hack.

We can search for vulnerability sites to hack.

All the command here must be type in Google search bar.

All without quotes.

?

Tutorial start from here:

1.intitle:

--For example, "intitle:login password".The title of all the search results will contain login password.

2.inurl or allinurl:

--For example, "allinurl:admin/login.asp".The urls of all the search results will all contain admin/login.asp.This command is good to find vulnerability sites.I prefer to use allinurl.

3.filetype:

--For example, "filetype:doc site:gov".This command will look for .doc at .gov sites.

4.related:

--For example, "related:www.friendster.com".This command will list out all the sites that are similar friendster.

5.intext:

--For example, "intext:hacking".This command will search for words in all the websites.

6.index of /:

--For example, "index of / admin".This command can let us to see something in index format.

Some example to find valuable sites to be attacked:

-allinurl:admin filetype:txt

-allinurl:admin filetype:db

-allinurl:admin filetype:cfg

-allinurl:file_upload.php

-allinurl:admin/login.asp

This is my tutorial for you.

Hope you all can get some useful information from this tutorial.

Type in the command from this tutorial in Google search bar for more understanding.

Thanks...

?
