Thread: [Spread RAT through starbucks internet](#)

Crosshair5599 - June 8, 2014, 10:48 pm

I have a method for spreading your RAT through lan. This is a good method if you live near a starbucks or any play that has free wifi!

REQUIRED!

1) Android Phone

2) Your file hosted on a file sharing website (or java driveby)

Step one - Download DSPLOIT for android. This has a bunch of useful features for what we will need! The website is [HERE](#)

Step Two - Go into DSPLOIT and choose "man in the middle attacks"

Step Three - Choose "redirect traffic" and then enter the link to your virus. This works best on JAVA driveby.

Step Four - HAVE FUN WITH SLAVES!

BottomNotch - June 8, 2014, 11:35 pm

Wrong section... Should be in hacking tutorials or whatever it's called. But, yea this should work. Nice method:)

hello im me - June 9, 2014, 11:45 am

Gonna try this out, hope it works:)

cYBEROPTICS - June 9, 2014, 10:49 pm

Thanks for this man!! gonna give this a go!

War On Retail - June 11, 2014, 2:06 pm

lol sorry I just read the title and wanted to say that sounds like it could be fun just because of how many slaves you would get good luck with that

edwardj7337 - June 11, 2014, 2:26 pm

Nice, I just started getting into WIFI "hacking" so this is just down my alley currently. Hopefully, not many of those hipsters will be using Apple devices. I live like 3min walking distance from Starbucks, so I can just park my car near there and fuck with them.

Thanks.

Does anyone know how to get this to work on like BlueStacks or something on a computer?
