Dr. Manhattan Official Review!
Intro

Hey there kind members , I'm Dr. Manhattan, and today i will be reviewing a different subject, a program ! Yes, I mostly do ebooks review's but i gotta say that I also love to test out other peoples programs so that I can also give them an accurate evaluation of them. And, as so, i must say that I will be reviewing the following program :

TWITTER HACKER

I got to say that i was given the necessary time to review it ,and now that I've completed my review, i will post it right away. Like always, I am in no way affiliated with the original seller, neither was this review influenced by it. As so, and in order to create a very detailed review about my thoughts of the program, i will be judging it in 5 different points of view :

- 1- Content
- 2- Functionalities
- 3- Ease of Use
- 4- Design
- 5- Bugs?

All of these sections (except 5) will be given a rating that can reach up to a 5 star rating
Without any further due, lets get to the review

Content

Believe me when I say that you got here a really nice piece of software. For just 10 \$, you will be getting a really nice amount of "content" since there are so many options for you to choose from. You can choose to create many accounts, you can choose to crack them, you can give stats to any account, you can receive stats from any account ... The options are quite a few, believe me, and also, you can see that from the screenshot's that the seller shows you. And, as so, you can really see that a lot of time and caring was dedicated to this project, and that has to be evaluated in a good way .

Score:

Functionalities

In order to being able to give you a really nice and detailed review of this section, i will go trough all of this programs "abilities" to show you the thoughts that i have about them . So , lets get this started :

REAL FOLLOWERS BOT 24/7

Works like a charm.The only thing that you have to do is , is to input your e-mail and twitter password. After that, you will just need to choose what is that you want your account to do . Do you want it to follow users with a specific tag ? Then just load a list of tags and the program will

automatically follow users with those tags. Do you want to favorite tweets? Same applies. Post tweet? Just give the program the message that you want to spread, and he will take care of the rest for you. I do have to say that in this section, the seller really gives you amazing options !

Give Booted Stats

This option also works really fine. You will use it basically to get followers fast, since you will have to load a list of twitter usernames and then you will be able to follow all of those users. Works really well if you want to get followers fast. Again, simple layout, and you will quickly understand what you got to do.

Get Botted Stats

Another nice option. You will also get followers with this option, but it will be fake ones, since the ones that you are going to use will be users that were recently created, namely by you. Still, just load a list of them and the bot will do the rest of the work for you.

Followings Manager

A simple and yet amazing option indeed, and also works really well ! Given the account details, it will show you all the users that you are following and get all of their information. It sounds and works really well indeed !

Account Creator

As the name implies, this option also works really well ! Maybe the only downside of it is that you have to manually enter the captcha code . So if you want to create a large amount of accounts, get those fingers ready, as you will have to input all of the captchas

Username Scraper

Again, works as intended. You just have to give a certain phrase, or even tag, and the program itself will look through Twitter to get all the info that you want. An amazing option, that is really handy in this program !

OG Name Checker

An awesome tool also, and it works quite well . The main objective is simple, check OG accounts. For that, you will just have to load a list of OG accounts, and the program will see if they are available. Works also really well !

Simple cracker

Also works decent. It will try to crack accounts that you give to it , so if you want to try your luck, use this option and you might get some really nice results .

BruteForcing

Not available in my review version

Account Checker

Again, will retrieve all the information that you have on a certain account. Really useful for keeping

track with all the followers !

Score:

Ease of Use

Using the program is quite intuitive i must say. Every "function" that the program presents to you can be easily understood and once you click it, you get a clear idea of what you got to do. Still, if you are having troubles using any kind of "functions" , the seller was kind enough to give you a Manual that will show , in a really nice and detailed way, what every "function" does and what it needs to have to run to its fullest. Besides all of that help that you get, I'm sure that the seller will always be available to answer all your remaining doubts. Still, you won't have any kind of problems , i do believe, in using this program.

Score:

Design

I must say that you really have to congratulate the user in charge of the design of the program (iSynthesis) . It has a really neat interface, and even if you use the program for several hours, you won't dislike it. Its clean, simple, and yet attractive theme that really doesnt have any downfall. You get new menus each time you click on a option , and in each option/sub menu that appears, you always know where to go and where to look to get the important information and that is because of how well the structure and theme of this program is organized. Again, iSynthesis should be congratulated. He did a fine job on this part of the program.

Score:

Bugs?

During the time that I was using this program, i was able to find some bugs that made me either force close the program, or restart it. Still, anytime that I had any kind of these problems, I reported them all to the original seller and he was always ready (and online) to answer and to fix those bugs that I was able to find in the program. Still, whenever I'm running the program, I still have some crashes, but I do believe that it's because I don't have my IE updated to the max . Taken that out of the discussion, I wasn't able to find a non working option. Not considering the "brute forcing" option , since my version doesn't have that activate , YET ! Still , if you do manage to find any kind of bug, you can always send a message to the original seller and he will quickly get back to you .

Conclusion

I am sure that you will enjoy all the features that this program has to oveer to you . Its a simple, beautifull and really effective program , and for any Twitter user that has interest in this kind of matters that the program offers to you, I would recommend you to buy it indeed, it is indeed a nice piece of software .

It all depends on the password list you use, but you can use multiple OG names and the bot tries 3 passwords per 1 second so its very fast ?

Thank you for purchasing ?

You load accounts into the accounts listbox by right clicking and then selecting the option you would like to use, and if you are using proxies in the account creator then you wont get any captchas, it will automatically create them for you ?

There is also a manual which comes with the bot in the Main tool under the Extras tab.

If you need any help with the bot add me on skype or pm me ?
