Thread: [AlwaysOnPc ~ Free Virtual Private Servers](#)

AtomParadjanov - June 10, 2014, 8:35 pm

I found it on google, is not created by me.

More About AlwaysOnPC

When you register for AlwaysOnPC, you get your own “virtual computer”, complete with your own file storage, applications, and personalizable desktop. This computer is ‘hosted’ on our servers in a secure, reliable data center. To access your AlwaysOnPC you simply need to get the AlwaysOnPC access software on the device/platform you are using, such as iPad, iPhone, Android, or a PC/Mac.

Apps and Features

AlwaysOnPC gives you over 40 apps you can use from your iPad, iPhone, iPod Touch or Android device. Here are a few examples:

Browse with Google Chrome, or Firefox with Flash AND Java support. Many websites don't work on iPad, iPhone, or even on Android because of Flash, Java or similar website features that rely on “PC-class” browsers. Now you can use those same browsers like Google Chrome or Firefox right from your iPad, iPhone or Android device. For example:

Access the Chrome Web Store, with tons of apps (like Picnik photo editor, or Evony or Runescape). Synchronize your browsing with your home PC

You can play Facebook Flash games on your iPad or iPhone, Access Quickbooksonline.com, or edit websites using Google Sites and many other systems that don't work on iOS Safari

Install Firefox Add-ons and plug-ins and toolbars just like you can on your computer...

Firefox with Flash player: It works great for all your favorite websites that don't work on mobile browsers, such as Facebook games, kids games like Club Penguin or WebKinz, real money poker – any site that requires Flash. Learn more about AlwaysOnPC Firefox...

(Note: We do not yet provide audio or full-motion video – these improvements are coming very soon!)

Learn more about Firefox & Flash on iPad, iPhone, and Android ...

Open Office Suite from your iPad, iPhone or Android device: Edit and save Word, Excel, & Powerpoint files from your iPhone/iTouch, Android phone, or iPad. These aren't ‘lite’ versions – you get ALL the Open Office features like: cut/copy and paste content or insert images or charts, and use 'mouse mode' to refine sizing and layout, run macros, create or fill in forms, etc. Learn more about Open Office mobile office suite features on iPad, iPhone & Android ...

(i have copy and paste text from the site)

This is a great share man! I have been looking for a VPS for a long while now for gaming stuff.
Thanks alot!

Edit: it crashes alot though.

Tommy Chong - *June 10, 2014, 11:29 pm*

"Free trial: You can try all our features for up to 5 minutes per session for up to five days. "
This VPS blows.
