Thread: [Wifi restart/block user/hack wifi](#)

Wellbloud - June 12, 2014, 9:39 am

Hello guys,
i have small problem with speed of my connections.

Situation: I live in boarding where is wifi connections for 25 students. All kids are stacked on internet 24/7 and downloading tons of files. So connections is really unstable.

Solution: I would like if is some way, for example DoS accurate on router for restart or better way to somehow penalize them. I don't know admin router password, if is here some solution to hack it, it will be nice.

Thanks for everything.

Use Netcut to cut their internet connection. They will be connected on network but without internet access.

The second option is to use aireplay-ng and deauth them but this will require to install Kali or Backtrack (linux) under VMware and a second usb network card compatible with linux (Alfa AWUS036NHA or AWUS036H).

Ok, i will try Netcut. It looks like perfect solution.
Thanks so much man.

zeus.flipper - June 14, 2014, 8:08 am

nice one! even i use netcut. it works much better. but the problem is we cannot identify whether the remote user got ARP poison or not :(

Go with netcut or get in their router, the de auth for airplay-ng will only work with people on the wifi connections, it will not work if they are logged into the router itself, and trying to send de auth packets to every student to keep them from being on the net will be a pain in the ass cause they going to re connect to it once the de auth attack is done
