Thread: [\[TUT\] Simple SE Trick to Steal Facebook Passwords](#)

SIM-2015410 - June 13, 2014, 6:31 pm

Hello HF,

I just wanted to share this quick trick with you. This method will allow you to get many facebook passwords, but it all depends on how gullible your friends are ?

1) Create a legitimate looking image/post along these lines:

Code Cool Facebook Trick #5

If you type your password into the comments box, Facebook will recognize it and replace it with *****

2) On another account (e.g. get one of your friends to do this)

Post in the comments "*****", and then say something like WOAH! It really worked!

3) If you repeat step 2 a few times, it will make it look more legitimate.

4) Hopefully some of your gullible friends will type their real passwords into the comments, and the instant they do this you should log in and steal their account ?

This is an easy and quick method, which doesn't always work, but i thought I would share it anyway. It works better if you have a page, like a computer tricks page or something, because more people will see it and try it out.

Thanks for reading, please reply to say thanks ?

I've seen people commenting on these posts, and stole my friend's accounts!

This really works sometimes :P

Works much better if you use an image, put it on a page, and then share it. Pretty good post in my opinion.
