Thread: [Silent JDB](#)

Paradoxal™ - June 15, 2014, 5:17 am

I have received a silent JDB from someone a while back. It comes with an applet.html & client.jar. I have the DarkComet rat and i'm not too sure how JDB's work. Will the JDB associate with my DarkComet rat? If so, then how?

zzzzzzzzzzzzzz - June 15, 2014, 6:45 am

In the HTML file should be something like a *yourlinkhere*. There you have to put ur direct link of ur file. I would suggest filehole.net for that.

hybridz0rz - June 15, 2014, 8:26 pm

I have an old tutorial on using JDB's. check it out and see if its of any use anymore ;)

You can can change it in the html if it's TJDB, you may need to make a rebuild of it since it's SJDB

Follow what these users said and you'll be set.

Please take note that it will not work for people running the latest Java.

Jinu - June 15, 2014, 8:42 pm

JDB got patched by Java. And many of them will run the latest Java.

Fgownage - June 15, 2014, 9:01 pm

silent JDB will work depending on the CVE and victims jre version

† **M? F?L** † - June 15, 2014, 9:58 pm

There is really no point, everyone is now required to have the latest version of java when they try to use it. So you won't really get anyone in my opinion.
