Thread: [Downloading a server's lua files](#)

Pluralistic ignorance - June 15, 2014, 6:05 pm

In the paid garry's mod cheat [aimware](#) there is an option to download all client lua files from the server you are in. Does anyone know how to do this and are willing to share it?

Why don't you ask on their forums. Do this look like a support forum for c&p trash?

You're sent all client-side files, upon joining. I think they just aid in LZMA decompression, on those files.

This. You just have to find a way to decrypt them ;]

Ahem. <http://www.facepunch.com/showthread.php?t=1353577>

Google-oo does wonders. Also, if you're planning on getting AimWare's GMod hack, I'd go with a group of coders that don't give you an enormous limitation on how you can use the hack.
