Thread: [Silent mining Question](#)

Patriotic - June 16, 2014, 6:06 pm

Hey Guys

How can I silent mine and ensure the victims graphics card wont fry? Is there anyway I can keep the temperature on a low? I have messed with the intensity but that doesn't make much of a difference. I there is or isn't a way to alter the temperature it would be great if you let me know.

Thanks

xBrokenSoul - June 16, 2014, 6:15 pm

I think a good silent miner can understand which temperature the computer is and maybe stop the miner.

I'm planning to do it and other more things on my silent miner if you check my threads. ?

Ok, thanks man I'll check it out!

I have a silent miner now I'm just trying to be cautious.

Most miners actually use a a certain '%' of the GPU / CPU too make sure the victim does not notice or their computer is dog slow.

It depends on the amount of threads

I personally use 4

4 threads usally result in 100 % CPU

if you want to use less then go 2 threads which can usally result in 50 % CPU
(depends on the computer)
