READ ME FOR HELP:

Code If you need any help on the thread, PM me and I'll get back to you and help you out.

I will not be editing the whole design for you and resending it.

I will simply explain what you need help with.

I'm giving this away for free, so don't expect me to completely redesign the whole thing for you!

Simply just send me a PM/Post on the thread, and I'll help you out with changing colors, or anything else.

Help:

All I can really say that'd be hard to change, is the color.

If anything just right click a lay that you like, and click on 'copy layer style', then paste that layer style on another layer that you want the same style to be on (if that makes sense).

Hope you liked the thread design, and if you're not going to use it, hope you learned something from it.

It's quite simple, so not much to learn off of.

Let me know if you are going to use it by posting on the thread, I'd like to see how many people have a use for this, and if a good bit of people use it, I'll be sure to release more!

Enjoy!
