Yeah well fuck Chrome. It specifically says "you're responsible for a virus scan." Can you read? Do it yourself.

Waist - June 22, 2014, 10:44 pm

Doesn't hit worth shit, tried it with 3000 private shells and 2 api's.

Don't bother downloading this.

xDarkrai - June 28, 2014, 4:55 am

hey lad, may i have the link it looks nice

swagster1337 - June 28, 2014, 8:05 am

Actually, this isn't very bad.

Ofcourse, it's not as good as a payed booter.

However, its very useful.

Thank you very much.

MrJulma - June 28, 2014, 9:02 am

Deleted from Mediafire. Can you PM me new download link, thanks! :)

Sorry I can't download this because exe files won't work on Linux. Also, this booter will fail to work in a few weeks. The shell's will use up to much resources on a webserver, causing the server to ban the hosting account.

Also, shell booter's are a waist of time. They can easily ban the web addresses when being ddosed. You might as well just get an IRC botnet.

You select your own shells and/or APIs.

I didn't see that part. Thank you for telling me. But, shell's are a lousy way of dosing a network. You might as well spend your time configuring a server on IRC, then compiling yourself a nice irc bot with exploit features like (Keylog, Ddos, Screenshot, USB Spread) and crypting your bot, then to upload a shell that is going to be dead in a few weeks.

Then you will have to upload more shell's just to get the stability of the strength back in your ddos attack.

Asuma - October 17, 2014, 6:28 pm

guys. do not download this. 1-it will be weak as shit. 2-it will hit you off before it hits them off 3-if you do hit someone off, it can be traced back to you, and you can go to jail or have to pay a fine. always do a online website-based booter. that cant be traced back to you. download if you want, just warning you guys the risks of downloading booters vs website based ones.
