Staying safe and Anonymous on the internet
Table of Contents

Introduction
Browser plugins
Virtual Private Networks and Proxies
Preventing a Dox
Cleaning up after a Dox/Removing threatening information

Introduction

Greetings. Being on the internet these days is incredibly dangerous, especially if one is striving to become a skilled hacker. At times people will attempt to directly harm you, and being anonymous can partially eliminate, if not completely eliminate the risk of being attacked over the internet.

On behalf of Legion, I would like you to assist you in gaining anonymity and staying safe on the internet in unique ways. Though there are many tutorials out here, including some made by me, this tutorial will truly help you in ways that other tutorials will not.

Now let's begin, shall we?

Browser add-ons

Internet browsers are something we use a ridiculous amount. In fact, you are most likely reading this on an internet browser, though I would hope and assume you would know that. Regardless, add-ons are essentially extensions which allow us to get the ideal experience with internet browsers. I will list some which I use which will help reduce spam, and help me stay anonymous.

(NOTE: Not all extensions will be available for all browsers.)

Zenmate:

This extension is simply a proxy. Though I will explain more about proxies later, a proxy essentially masks your IP, which is important as it can say a lot about your location. That is why Zenmate is so useful.

Zenmate for Chrome: <http://gg.gg/2el7w>

EXTRA ZENMATE PRIVACY INFO:

Spoiler ([Click to View](#))

(Jun 17, 2014 11:01 PM)Doc Brown Wrote: [\[CITE\]](#) When using zenmate, go to [cloakfish](#) and go down to what your ip and browser reveal about you, and go to the ip. it will have the ip zenmate has made for you, and if it also says leaked ip along with your real ip address, use an addon called [flash control](#) and everything should be ok! ?

All credit to [Doc Brown](#) for the extra info.

ADP/ADE:

These two extensions essentially block ads. These can be helpful in blocking ads which do any tracking.

ADP for Chrome: <https://adblockplus.org/en/chrome>

ADE for FireFox: <http://gg.gg/2el8b>

Disconnect/DoNotTrackMe

These two plugins block online trackers placed on many modern websites. Though they are very similar, they do have some different features. Try both and decide which you prefer.

Disconnect: <https://disconnect.me/>

DoNotTrackMe: <https://abine.com/index.html>

HTTPS Everywhere

HTTPS everywhere connects you to websites in HTTPS.
[Unfamiliar with "HTTPS"?](#)

HTTPS Everywhere for Chrome: <http://gg.gg/2el8v>

HTTPS Everywhere for Opera: <http://gg.gg/2el91>

HTTPS Everywhere for Firefox: <http://gg.gg/2el98>

Virtual Private Networks and Proxies

Virtual Private Networks and Proxies are both similar and incredibly different. How are they similar? They both mask your IP (Internet Protocol) address, which is an identifier of your computer/internet. How are they different? Virtual Private Networks, better known as VPNs encrypt the data transmitted between you and a server you are connecting/contacting with, while a proxy only masks your IP address.

Though I would personally recommend VPNs as they hide your data far more efficiently, (especially if you're doing anything questionable) though a proxy can hide your IP just fine, in most cases that is.

Free proxy lists:

<http://proxylist.hidemyass.com/>
<http://www.proxy4free.com/list/webproxy1.html>
<http://www.freeproxylists.net/>
<http://free-proxy-list.net/>
[https://\[censored\].com/free-proxy-list/](https://[censored].com/free-proxy-list/)

VPNs I would recommend:

RA4WVPN: <https://hackforums.net/showthread.php?tid=3762152>

You may be curious why I would recommend so few VPNs, as the number is so few that it doesn't even suit a plural word. Well, that is because this is the only one I have personally used and enjoyed. Though I am sure there are many other great VPNs, I can trust this one especially.

Why? Well, let me share a little guide to buying a good VPN.

1. Check if it keeps logs. You don't want one that does keep logs.
2. Check if the servers are fast. This usually is not too hard as servers speeds are usually provided.
3. Check how many locations there are.
4. Check prices. Are they reasonable?
5. Directly ask the owner if the servers are offshore servers.

If you follow these steps, you will purchase a VPN that keeps no logs, is fast, and keeps you nice and anonymous.

Now you may be wondering why you would need to hide your IP in the first place. Well, to begin with, they show your location, assuming you're not under the shelter of a proxy or VPN. They can also leave you open for DDoS attacks, which are flat out obnoxious.

Preventing a Dox

This is incredibly vital to staying anonymous, as having a dox released is completely destroying your anonymity. Now I didn't crack down on this at first, and it really came back to bite me later on. So please, don't make the same mistakes I did.

Now this whole tutorial is assisting you in preventing a Dox, but what I am about to share with you is what will really help. Though, I must say, a VPN/Proxy will really help as well.

To begin with just hide your IP in any way, shape, or form possible unless you are connected to a public network. That means looking up ways to block Skype resolvers if you have Skype, using proxies when going to unknown websites, etc.

Another general rule is just don't give out any info about any more than the country you live in. That

means your province/state, city, postal/ZIP code, or anything else revealing. Just don't put it out in public. The only time when it is acceptable is if you need to enter it if you're purchasing something online from a trusted seller and they require your shipping address.

Also, be careful where you put your email address. Use disposable Email addresses for questionable sites which you don't completely trust.

I would also recommend generating a fake identity and using that for any websites you sign up on. I personally have two which I have been using for years.

Fake identity generator: <http://www.fakenamegenerator.com/>

Cleaning up after a Dox/Removing threatening information

Say you are like me. You've been doxed, and/or you have details out there which you want to get rid of. I will help you out with that.

To begin with, Google your name. If you see it connected to any of your aliases, remove it. That could mean reporting it, contacting staff, or changing information on social media accounts or WhoIs databases.

Do the same with any other details about you. Your address, IP address, Email, Aliases, etc. Try to remove it all. If you need help doing so, feel free to drop me a PM and I will do my best to advise you on getting it removed.

Also look at Dox guides and try to Dox yourself. If you are vulnerable, try and get everything removed or try to cover it up.

I would also post fake doxes of yourself all over the place.

Now that is about it as far as that goes. Remove, contact, and change is all you can do.

Thank you for reading my guide, and I hope it helped you. Constructive criticism is very welcome.

Lisbeth Salander - June 17, 2014, 5:03 pm

TY v v useful for paranoia! Will definitely be reading and. Implementing these techniques and hopefully never have to deal w/anything!

Zabuza? - June 17, 2014, 5:05 pm

You're very welcome. I hope these techniques help serve you well.

G[^]NNIcus - June 17, 2014, 5:16 pm

Nice thread OP.

What do you think about nVPN, been using them for couple months, they claim they don't keep logs tho.

Skorp - June 17, 2014, 5:18 pm

Kind of common sense, but oh well... thanks for contributing to HF.

Zabuza? - June 17, 2014, 5:21 pm

(Jun 17, 2014 05:18 PM)Skorp Wrote: [\[CITE\]](#) Kind of common sense, but oh well... thanks for contributing to HF.

I wouldn't go so far as to call it common sense, but thank you regardless.

I am afraid I have never looked into them, though if you give me a few minutes and a link, I will do so for you.

koewz - June 17, 2014, 5:33 pm

Very nice tutorial, for everyone in hack world.

Zabuza? - June 17, 2014, 5:47 pm

Haha, thank you. Glad to help those in "hack world".

Dangerous Beef - June 17, 2014, 5:50 pm

This is a great tutorial, though the doxing part is mainly common sense at least for me.

Thank you for contributing!

Zabuza? - June 17, 2014, 5:58 pm

Thank you for contributing!

Thank you, and I'm glad to help. The doxing part was mainly focused towards those who were newer to doxing, but to also at least give a little information to those who are familiar with the concept.

Regardless of where you stand, I hope I helped you out, and again, thanks.

badboy3 - June 17, 2014, 9:39 pm

Thanks for this man! Really good way!

No problem :) Glad you liked it so much.

Slapyournet - June 17, 2014, 10:35 pm

I was reading up on Zenmate and apparently it leaks your IP?

Zabuza? - June 17, 2014, 10:38 pm

(Jun 17, 2014 10:35 PM)Gone1900 Wrote: [\[CITE\]](#) I was reading up on Zenmate and apparently it leaks your IP?

Please send me where you read that. It also won't matter if you are simply using ZenMate to mask your IP when going to a risky site.

Silent ? - June 17, 2014, 10:39 pm

Nice Tutorial should be handy for beginners!

Innocent Vigilante - June 17, 2014, 11:01 pm

When using zenmate, go to [cloakfish](#) and go down to what your ip and browser reveal about you, and go to the ip. it will have the ip zenmate has made for you, and if it also says leaked ip along with your real ip address, use an addon called [flash control](#) and everything should be ok! ?

iDuL - June 18, 2014, 12:36 am

Thanks for the comprehensive guide.

Added a few plugins I had no idea about.

Blue Spy - June 18, 2014, 3:50 am

Hello great tutorial!!

Do you have any suggestions for anonymous search engines e.g Freenet, duckduckgo e.t.c?

1655199_temp - June 18, 2014, 5:06 am

This is a very nice tutorial to contributing for hf thanks mate.

America99 - June 30, 2014, 12:51 pm

Thanks for tutorial man, its very good, Nice

Thanks for the compliments! And as far as search engines, I honestly just use Google with a VPN.

You could probably just google "Anonymous search engines" and find a decent one.

(Jun 17, 2014 11:01 PM)Doc Brown Wrote: [\[CITE\]](#) When using zenmate, go to [cloakfish](#) and go down to what your ip and browser reveal about you, and go to the ip. it will have the ip zenmate has made for you, and if it also says leaked ip along with your real ip address, use an addon called [flash control](#) and everything should be ok! ?

Thanks for that extra info. Added it to the OP.

Sky - July 2, 2014, 5:25 am

You make some "How to stay Anonymous online" tutorial then recommend a Hackforums VPN?

Okay.

~Arcane ?

manii - July 2, 2014, 6:46 am

Thanks for the tut!

Was nice reading trough this.

~Arcane ?

He gets Metasploit and Putty confused. Cut him some slack

??

Aurora - July 3, 2014, 9:39 pm

Very nice HQ tutorial. Posting now so I may check again later.

Talu - July 4, 2014, 10:14 am

Pretty good and detailed tutorial. Good job.

CrypticX - July 11, 2014, 3:12 pm

What does it mean if the VPN's servers are offshore

Maybe the VPN does not keep logs but their ISP does?

GetHype690 - July 11, 2014, 4:00 pm

Good tutorial. Thanks for the post, OP.

Niely - July 25, 2014, 8:18 am

Very well! Will keep this in my mind to take a look at those tools/add-ons.

Can come handy for me. :)

PRNDL - July 25, 2014, 1:02 pm

thnx for recommending the hf vpn br0 safest vpn no log black cock activity

Stoke - July 25, 2014, 1:03 pm

A great tutorial in the name of Legion.

I haven't had chance to read it all, I'm like half way into it.

Cheers.

p0iz0n - July 25, 2014, 1:11 pm

This is a Really Nice Tutorial.

Thanks for Sharing.

Batch File - August 25, 2014, 10:05 pm

This is one of the best probably the best guide I have ever seen very nice work!

needsanewcomputer - August 25, 2014, 10:44 pm

Very detailed. Thanks for the information. I'll definitely put this into practice.

cherokee - August 26, 2014, 6:04 am

Great tutorial mate! it helped me a lot :D Thanks
