Thread: [How to hack a Facebook account. \(Works 85% of the time\)](#)

RickAstley - June 19, 2014, 11:17 pm

Hello Hack Forums Community! Hacking a facebook account is not an easy task, because now a days faecook started to focusing more onto their security. (In order to prevent their users from being hacked.) I have tested this method on 10 accounts, and it worked on 8.

Step1: Go to victim's page and get there email, then log out of facebook.

Step 2: Make (or crack) 6 FAKE (or cracked) profiles with info and pictures (try to make it looking like legit).

Step 3: Send the friend request to the slave from those 6 accounts.

Step 4: Go to facebook.com and enter the email you have got on step 1 and click forgot your password.

Step 5: When you get to the secret question, take a couple good guesses at what those passwords could be.

Step 6: If you fail the secret answer three times don't worry, it will ask you to select 3 of your trusted friends. Then facebook will send the code to those friends. Now we're going to choose the 3 fake profiles we made as the trusted friends.

Step 7: Log into all of the fake profiles and retrieve the codes.

Step 8: Finally reset there password and enjoy your victim's facebook.

Moral Of This:

1. Never accept unknown friend requests.
2. Never disclose your e-mail address.

Enjoy!

? Cheers! ?

Encoded' - June 20, 2014, 5:21 am

Nice tutorial, RickAstley. Might try this.

?**Jamie** - June 20, 2014, 5:23 am

I am sure this don't work because when you get the codes sent to someone they must be friends or family. They must be close to the person. I may be wrong.

n0thing - June 20, 2014, 5:28 am

Seems to easy and good to be true, none the less, nice tutorial.

Akel? - June 20, 2014, 5:28 am

Read what the OP wrote really closely.

SIM-1241186 - June 20, 2014, 5:48 am

(Jun 20, 2014 05:28 AM)Akel? Wrote: [\[CITE\]](#) Read what the OP wrote really closely.

What about reading it closely? I'm pretty sure the guy is right.

Not everyone is considered a "trusted friend" just by having them added.

In fact, I'm pretty sure you can choose who is trusted and who isn't, and without adding them into that trusted list, you're out of luck.

Method won't work.

?Jamie - June 20, 2014, 5:50 am

(Jun 20, 2014 05:48 AM)hackforumspang Wrote: [\[CITE\]](#) What about reading it closely? I'm pretty sure the guy is right.

Method won't work.^^

This is completely what I mean, You need to be on a list of being trusted by the main user and be close. New accounts probably wont have ANY chance at all.

markzuckerberg - June 20, 2014, 6:39 am

This method is too old i heard about it in 2012 it doesn't work.. but it worked 1 month in 2012 and patched with a new security options just like Zaros Maqe and hackforumspang said.. but thanks for sharing this idea with others, keep the good work brother.

RickAstley - June 20, 2014, 7:13 am

Thanks everyone for replying! This is my first tutorial, so let's hope there are more to come ?

? Cheers to all! ?

Waiting your next tutorial mate ?

RickAstley - June 20, 2014, 8:32 am

(Jun 20, 2014 07:48 AM)GlobalCoder Wrote: [\[CITE\]](#) Waiting your next tutorial mate ?

Working on it right now!

? Cheers! ?

unitedmelonpvp - June 21, 2014, 8:41 am

Thanks for this, I will try this now.

RickAstley - June 21, 2014, 8:43 am

(Jun 21, 2014 08:41 AM)unitedmelonpvp Wrote: [\[CITE\]](#) Thanks for this, I will try this now.
Good luck! It will take time, so put in said time.
The payout is worth it.

motrox - June 21, 2014, 1:50 pm

When I get to the forgot password button it never gives me the option for secret questions.

RickAstley - June 21, 2014, 1:52 pm

(Jun 21, 2014 01:50 PM)motrox Wrote: [\[CITE\]](#) When I get to the forgot password button it never gives me the option for secret questions.

You need to follow the steps it gives you

DaChosenOne - June 21, 2014, 8:09 pm

Patched long time dude, if you say it didn't prove it

Ninth - June 21, 2014, 10:45 pm

This seems like it could probably work. Ill try it out :D

Ice_Cool™ - June 22, 2014, 11:51 am

this si old one,and it has been posten long time ago,i dont know why peapole love to post and copy,wtf...

Talu - June 22, 2014, 3:12 pm

Thanks for this tut, will look into it.

RickAstley - June 22, 2014, 6:25 pm

(Jun 22, 2014 03:12 PM)Xero? Wrote: [\[CITE\]](#) Thanks for this tut, will look into it.

Yeah, a lot of people are saying it dos'nt work, but again, I have had success with it.

Paperclip - June 23, 2014, 3:39 pm

This is an ancient tutorial...worked for a month and was then patched in 2012.

RickAstley - June 23, 2014, 4:17 pm

(Jun 23, 2014 03:39 PM)Paperclip Wrote: [\[CITE\]](#) This is an ancient tutorial...worked for a month and was then patched in 2012.

Actually, you are incorrect. It worked for me. 8/10 accounts

luckyheart - June 24, 2014, 5:59 am

rickastley bro this is old method and its not working any more

RickAstley - June 24, 2014, 12:54 pm

(Jun 24, 2014 05:59 AM)luckyheart Wrote: [\[CITE\]](#) rickastley bro this is old method and its not working any more

...

Did you not read what I said 3 times???

suchalonelyday - June 24, 2014, 5:10 pm

most of the time the accounts only allow email recover and no friend responses...

SIM-1866423 - June 24, 2014, 5:19 pm

Welcome the "Social engineering" class ! xD

nextgenerationhacker - June 24, 2014, 9:54 pm

Old method, Don't know whether its still working.

??????? - June 24, 2014, 9:58 pm

This isn't really hacking, it's just using Facebook's password reset page to gain access into their account. It's a good method though.

Lozy - June 25, 2014, 4:00 am

Don't think it works anymore for now, couldn't access to the page to send codes to 3 friends, only use my hotmail account or email me a link to reset the password.

Hexley - June 25, 2014, 4:03 am

Don't forget to add multiple pictures and tag the victim in them.

casperr - June 25, 2014, 2:51 pm

Looks great ! Thanks for the share I will try .

5poster Ez spam

In all seriousness, I can't stand people like this, shitposting

ZYZZ BRAHHH - December 30, 2014, 2:51 pm

Not going to lie this is smart, the thought of hacking this one chicks FB striked me but 'New Year, New Me'.

Gottfrid Svartholm - December 30, 2014, 2:54 pm

This sadly does not work. By the way, search for flamingw0rm, this tutorial is his.

(Dec 30, 2014 03:46 PM)RickAstley Wrote: [\[CITE\]](#) 5poster Ez spam

What is your problem dipshit?

Charmander - December 30, 2014, 3:08 pm

Nice tut trying this now haha looks soo good and easy

Darkorbit GamerZ - December 30, 2014, 3:44 pm

Nice tutorial I know this method ^^

RickAstley - December 30, 2014, 4:16 pm

This was one of his ONLY 5 POSTS

trying to get 5 posts for download or some shit

EIP - December 31, 2014, 11:40 am

Not a bad idea to hack facebook account... Keep sharing !

Kali.Linux - December 31, 2014, 1:55 pm

I might try it, looks really cool i will try it

Demoralise - December 31, 2014, 2:58 pm

Although this method works, getting the 6 friend requests accepted is harder than it seems.

Executive - December 31, 2014, 5:44 pm

Is this method working at the moment?

RickAstley - December 31, 2014, 7:45 pm

(Dec 31, 2014 06:44 PM)Anda167 Wrote: [\[CITE\]](#) Is this method working at the moment?
Should be.

It is a simple method, so it's not like there's a, "Patch"

Aziz Shavershian - December 31, 2014, 7:46 pm

Nice tutorial mate. I hack some of my local friends because there security question is like where is your mum from lol.

Executive - January 1, 2015, 12:13 am

No cause this was made about half a year ago and Facebook hasn't come up with better security/recovery methods? xD

triforcee - January 1, 2015, 3:47 am

This is a pretty smart tutorial, although I've never been in a need for a Facebook account to be hacked anyway.

Peng - January 1, 2015, 5:25 pm

Just tried it and it didn't work don't think I did anything wrong

Darksider28 - January 3, 2015, 4:18 am

Good share man never thought of doing this way.

SIM-2662262 - March 25, 2015, 1:11 pm

You might be able to find a brute forcer somewhere on here. Also try doxing them and resetting the SQ.
