Thread: [\[Polymath\] How to tell if someone has blocked you on Facebook. \(No custom URL needed\)](#)

lcYSeptember - June 20, 2014, 6:41 am

First thing, this does NOT require a "custom url," you can do this with nothing but the user number.

Now, open the conversation with the user who you suspect has blocked you and click on their name:

It should open a larger conversation window. Copy the number in the URL:

Then go to this page:

<https://www.facebook.com/settings>

Press F12 and paste the following, changing "0000000000000000" to the number you copied from the URL.

```
Code document.getElementById('contentArea').innerHTML='<a href="#" rel="dialog"
ajaxify="/ajax/friends/inactive/dialog?id=0000000000000000" role="button">Blocked?</a>';
It should now look like this:
```

Click the word, "Blocked?"

If the person has blocked you, you will see this in the window at the bottom (where you pasted the code):

If the person has a deactivated account, it will bring this up this messagebox:

Impressive in the sense that you knew how to do this, however non-practical in my circumstances since I could not give 1/10th of a fuck if some cuntfuck blocked me

Well, in some cases you'd want to know if they've deactivated your account.

Another, easier way, that I've discovered: if you've ever chatted with them and they blocked you, it will still show their picture in chat. If they've deactivated their account, it will show a "no-avatar" type picture (the white silhouette of a person with a grey background).

Extr22 - July 5, 2014, 11:16 am

Or, you know, copy the url to their profile, log out of facebook and then go to their profile again....

If they have their profile set to private, I don't believe that won't work.

Ah, yes, that might be true actually.

Mewtw? - July 6, 2014, 4:22 am

I find it useless since when people block you, you can't see their profile so you'll know they blocked you

neil5050 - July 7, 2014, 5:39 pm

There are easier ways to do this. Just saying.

For example if I type in graph.facebook.com/theiruserid

it will say if the account exists or not. If it exists then they blocked you.

Stem - July 7, 2014, 5:43 pm

This is a nice method on how to tell that people blocked you, But i go for the easy way and ask a friend to check if there account has been deactivated.

Regards,

-Stem

This only works when a user has a custom url, eg, "www.facebook.com/zuck"

wrong sir ->

for example (custom url not enabled)

<http://graph.facebook.com/4>

will do the same as (custom url enabled)

<http://graph.facebook.com/zuck>

Ah, that must new. It didn't work for me when I tried it before I made this tutorial.

Not new -> because I wrote an app that used this same concept that basically shows me every single person that removed/blocked/deactivated their account on my friendlist.

This method using graph has been existing for a while. Its a way faster method.

My app looks like this

(Jul 5, 2014 11:17 AM)IcYSeptember Wrote: [\[CITE\]](#) If they have their profile set to private, I don't believe that won't work.in that case I'll be using one of my class fellows' account which is always open in one of the 4 browsers installed in my pc ;)

OP! really good share & don't give up the efforts :)

Cyber Saint - July 9, 2014, 12:51 pm

This is one of the many available methods for doing this, some simpler than others - this does work. Nice share.

Talu - July 9, 2014, 1:16 pm

Thanks for sharing this. Actually pretty useful.
