Thread: [Can someone help me turn VPS into a DoSer?](#)

German Shepherd - June 21, 2014, 5:29 am

Can somebody please set this up for me through Teamviewer? PM me and I will reply with my ID and pass. Thanks!

Erm, just find a shitty old public perl script. Also, more than likely your VPS isn't spoofed and your hosting company is going to get pissed at you when you use up all their bandwidth so I wouldn't do that...

logging*machine - June 21, 2014, 5:43 am

Just use it as a VPN even though it'll most likely keep logs.

I would not recommend using it as a booter, you're gonna lose that shit in seconds.

I know how to do that. Plus I bought it to Dos with I know the chance of getting banned what I am saying is I can't connect with FTP or anything. It's like all commands are disabled or something.

I have a paid VPN with no logs. I don't care if it gets banned.

Yeah, I'm pretty sure that Server hosting company's are obligated to keep logs unless they're located outside the US. Correct me if I am wrong.

But yeah, don't use it as a booter that is a really bad idea. If you want a booter setup with putty or MIRC you need to get a dedi that is spoofed.

To be honest some company's go farther then just banning you, as you're using their services to do illegal activities.

It's a \$5 root I don't care if it gets banned lol. I'm just dumbfounded that I can't set up a simple dos script on this vps.

The VPS is from Brasil and I'm in the US does that make a difference?

I can install these scripts:

ACK

AMP

ARME

CHARGEN

CHARGEN-Scanner

ESSYN

UDP-LAG

RUDY

SLOWLORIS

SSYN

SUDP

TCP

UDP

XMLRPC

XSYN.

Pm me for my skype.
