Thread: [Ophcrack wont boot on this laptop but will on my other one?](#)

Mutiny - June 22, 2014, 2:53 am

Okay so I've setup ophcrack on my usb it works on my other laptop PERFECTLY. I select it to boot my USB on this one and then it just gets stuck at the firstline with copyright n stuff.

What is blocking it?

Niely - June 22, 2014, 3:39 am

I think it's a problem with converting .iso to USB.

Have you already tried it with burning it on a DVD?

Everything works correctly in my USB on my other computer by not on this one.

I don't have any blank discs, which ones should I get?

Try running it in a VM <https://www.virtualbox.org/>

Do you mean to test it or to launch it? I don't think it'll get passwords from my computer with it running on a VB if that's what you meant

check your laptop meets the right specifications for ophcrack
