Hello Developers

I need someone who can build the following with my budget. Please pm me what you can charge and how soon you can start and finish.

A Personal database of all the people come into connection with like a contact list but with alot of fields such as hair color eye color date of birth partents names kids names etc etc

I need it to do the following

I need to beable to securly log into my website

I need to beable to add a person into my website

Add an image of that person

Add that person contact information , Personal information , Business information and more about 100 fields of info

I need all those fields able to be Filtered so lets say I log on and go to the Search tab I will beable to search for Molly and then from that filter green eyes it will then show all mollys with green eyes or If I dont know the persons name I can just search green eyes and it will show everyone with green eyes but it needs to do that filtering /searching with all 100 fields .

I need to beable to view the person and it almost look like a document a printable document of all the info that was inputted for that person.

Who can do this please let me know .

I'm hoping that when you mean search for green eyes, meaning that when you add a person, there will be an option to add eye color right?

I am interested and I would like to have more information. I sent you a private message

BrainDeadGenius - June 26, 2014, 3:58 am

I'd like to do this for you. I can start possibly tonight, or tomorrow night. If you could send more information to me, that would be good.

How much are you willing to pay for this? Also, do you want a fancy design/template coded/integrated with the project?

Just shit from themeforest admin templates ui templates etc.... Also around 100\$ since I already gave some other guy 50\$ upfront and he disappeared.

PM me with details of the field and pages you'd like. I'll give you a price in your ballpark. I'll make the site first, you can pay after (BTC).

My prev work:

I guess you don't want us to take it.

Sorry it couldn't work out!

?

For the love of god.

Are these retards actually giving you a form with 100 fields rather than just giving you an admin interface to manage the fields themselves? Then you could do just about whatever the fuck you want without paying them again... Just saying...
