Thread: [\[easy SQLi Challenge #5\] by ToOoL](#)

ToOoL - June 26, 2014, 6:12 pm

Hello folks. ToOoL here with another pretty simple exercise for you today ?

Target:

Code aHR0cDovL29sZC5jYWdlcHJpc29uZXJzLmNvbS9hcnRpY2xlcy5waHA/aWQ9MjU2MzI=

Decode the above with Base64

Tasks:Display User

Display Your name

Display Database name

Display a small image of your choice

Proof:

Rules:use union select based normal SQLi ONLY, NO TOOLS (no Hajiv, sqlmap, etc etc)

post picture as proof and send me your syntax to PM

First 5 solvers get credit on the solvers list

Solvers:dotcppfile

SPI3DR

benzi

antonn

Corniche

Special shoutout to Killu - nice image lol

As alyways, have fun and Goodluck sirs ?

dotcppfile - June 26, 2014, 6:38 pm

SS???

(Jun 27, 2014 06:22 AM)dotcppfile Wrote: [\[CITE\]](#) Wrong thread mate, this isn't what this challenge is about.

It is. You need to have an image, the db name, the username and your own name. Don't I have that?

dotcppfile - June 27, 2014, 9:06 am

It is. You need to have an image, the db name, the username and your own name. Don't I have that?

Get the same output that everyone is getting in this thread, enough said.

antonn - June 27, 2014, 9:33 am

(Jun 27, 2014 09:06 AM)dotcppfile Wrote: [\[CITE\]](#) Get the same output that everyone is getting in this thread, enough said.

I completed the challenge as stated in the main thread. But specially for you:

?

Bro, how to put names (themastersinner) like on that pic. I only know user(), database(), and other. Would u tell me the code? Or maybe anyone else know? ?

Then about the pic, is it photoshop or based on a code/ syntax?

antonn - June 28, 2014, 2:57 am

If you want to use costum text then you need to encode your text with a ascii to hex converter. then you can use your custom text like this:

```
Concat(Database(),0x616563,user())
```

dotcppfile - June 28, 2014, 3:16 am

You dont always have to use hex at all, just in thid website because there's magic quotes. You can

also use anything else than Hex but anyways...

antonn - June 28, 2014, 3:24 am

Only if its a string injection you can use 'text' in SQL, and mostly you have an int injection and you must use hex.

Impress. - June 28, 2014, 3:33 am

Use concat(0xNameInHexHere

Hope this helped a bit.

 text here

dotcppfile - June 28, 2014, 4:16 am

It's just HTML Tags, you probably donno how to do it because you donno how sql injection works, but anyways.

Mr_Ratz - June 28, 2014, 4:48 am
