Thread: [Web Design + Development | Resources & Repositories](#)

Mittens - June 26, 2014, 8:17 pm

I recently stumbled upon a very useful [list](#) on [/r/web_design](#) by [/u/epaGamer](#) and noticed that the navigation was not the easiest, nor was it recognized enough by the subscribers of the sub-reddit. I've decided to create this thread to easily view the pages of this list by using the quick-links in the Table of Contents. This thread will provide useful resources for both web design and development.

Great collection of resources here!
I appreciate the kind words! I spent quite a few hours posting links... ?

JumpWar - June 27, 2014, 12:32 am

Good selection.

Especially like the "Inspiration" part, some sites there I didn't know about.

Sam_ - June 27, 2014, 11:58 am

This is some pretty nifty stuff you've got there, Mittens. I'll be using it some in the future when I begin working on my website.

Bin4ry - June 27, 2014, 12:23 pm

Very nice OP, Thank you :)

Regards,
Bin4ry

SIM-888979 - June 27, 2014, 11:59 pm

Amazing repositories of useful information. Thanks dude!

Crypto™ - June 28, 2014, 4:37 am

Awesome list :) Still have some stuff you should add though ;)

Front-end frameworks:

Angular.js - <https://angularjs.org/> (More feature-rich than Backbone, and can use, but doesn't depend on jQuery)

Knockout - <http://knockoutjs.com/> (This one's just fun to use. DuckDuckGo uses it :3)

Stock Photos:

Unsplash - <http://unsplash.com/> (10 Free Public Domain [CC0] Images every 10 days)

Hosting:

Heroku - <https://heroku.com/> (PaaS that supports PHP:

<https://devcenter.heroku.com/articles/getting-started-with-php>)

OpenShift - <https://www.openshift.com/> (Another Paas with PHP support)

Also, since you mentioned GH Pages, which is static only, you should mention some static site generators~

<http://www.staticgen.com/>

Templates:

<http://templated.co/>

Some Reusable HTML Goodies:

<http://codyhouse.co/>

Also, was going to keep this one for myself when I decide to do a Node.js focused one of these, but...

<https://meteor.com/>

Program:

<https://atom.io>

Online IDE that provides a free development VM:

<https://koding.com>

Some awesome payment processing stuff:

<http://jessepollak.github.io/card/>

<https://stripe.com/>

I already had Unsplash included in there. Thanks a lot for your contributions to the list, I have added your links into their correct section. My friend showed me Atom but I was pretty annoyed when I saw it was only for Mac. ?

Crypto™ - June 28, 2014, 2:09 pm

There's some guy who's actually building Atom for windows as the releases come out :)

<http://atom.someguy123.com/>

I'll probably find some more stuff to contribute when I take the time to actually dig into my bookmarks folder. :P

Crypto™ - June 28, 2014, 3:11 pm

(Jun 28, 2014 03:06 PM)Visual Basic. Wrote: [\[CITE\]](#) Are the list from best to worse or just random order ? Great info

Random order, as best to worst would be extraordinarily subjective xP At least I hope so.

Oh! Ember.js is another one Mittens~

Thanks! If you have any additional tools or sites you know of please let me know.

STR™ - July 2, 2014, 10:38 am

Its really a HQ thread , i can see that you really spent huge time on making this thread , and it will be useful for many

Love your thread

Tasemu - July 2, 2014, 5:41 pm

Amazing thread. This seriously needs a sticky in my opinion. I wish I had something like this back when I didn't know about the sites listed here.

Mittens - July 3, 2014, 12:27 pm

(Jul 2, 2014 05:41 PM)Tasemu Wrote: [\[CITE\]](#) Amazing thread. This seriously needs a sticky in my opinion. I wish I had something like this back when I didn't know about the sites listed here.

Thank you very much! I took a quick look through this section and couldn't find a compiled list of resources like this so I figured this would be a great thread to make.

yasje - July 3, 2014, 2:07 pm

Nice thread! keep up the work.

some links are very helpful!

Naveen - July 4, 2014, 10:59 am

Really Good thread mate, Really useful. I wonder why you did not mentioned DreamWeaver in editor?? Is that worst?

Mittens - July 4, 2014, 12:40 pm

(Jul 4, 2014 10:59 AM)Naveen Wrote: [\[CITE\]](#) Really Good thread mate, Really useful. I wonder why you did not mentioned DreamWeaver in editor?? Is that worst?

Using Dreamweaver as an editor is fine, but relying on it for maintaining and coding is not. It's

common practice to stay away from the visual editor as it throws in a lot of unnecessary syntax. It's decent if you're starting out in web development/design but as you continue forward, there are other IDEs out there that surpass Dreamweaver. Sublime Text 2/3, Brackets, Coda and Notepad++ are some of the most popular IDEs to use, especially when paired with plugins like [Emmet](#).

davd665 - August 26, 2014, 3:10 am

please guys, i am new on HF. I need some one who can help me create something similar or better than the link below.

<http://www.hiperio.com/media/k2/Purchase/googledrive.php?userid=diamondtis%40yahoo.com>

As it works: When a client clicks on the html attachment or link, it opens the page with his email embedded for him to only type his password. Just like the yahoo address there.

Please I am in urgent need of this and will pay for the services.

Waiting for a positive response

sweet_mike - August 29, 2014, 6:09 am

those css tricks websites are really cool...helped me alot...thank you very much

invier - August 29, 2014, 8:26 am

Thanks very much, must and most helpful.
