Well, that one is not working with the latest minecraft protocol, as well as the latest minecraft authentication methods (only works with cracked servers). Also, MineBot has a scraping capability!

Thanks for posting that, I meant to clear up that concern.

Also, thank you all for the nice comments!

Thanks,

In a short explanation this program scrapes a series of popular Minecraft servers, and from there it can go onto each server and spam a message of your choice. The process can be set to be repeated as many times as you'd like. You don't even have to have the minecraft client open for this to work, you just need java installed, .Net, and a Minecraft account.

Yes I also meant to state, with this program you will be more than able to open your own spreading service. You Just can't share the program or allow other users to manage it for you, part of our terms of conditions.

Does this have proxy support and if not, will it have it in the future?

(Jun 27, 2014 07:49 PM)Ridge™ Wrote: [\[CITE\]](#) Does this have proxy support and if not, will it have it in the future?

There may be, but as of now it's not necessary.

If your worried about your I.P you can always use a VPN to mask it, and if you need a free one I know a really nice one!

Well I mean on a big scale you could be going through several IP's a day... I'll hold off on purchasing until proxy support is added.

IntelliJ - June 28, 2014, 3:15 am

Going to hold off on buying for the meantime, unfortunately, as the price is very high for what it does. Essentially it's going to a hosting site and choosing a server, then spamming a message. You could do it manually, but I can see that you definitely tried hard on this product.

Edit: PM'd a partner of mine as well as another member of HF regarding this. May buy it. shrug

Well thanks for the feedback! Stay posted,

And yes there is a lot more work that has been put into this than you'd think.

For proxy support, it's not essential. Will take it into consideration though.

For what it does it is definitely worth the 25\$ it is now, but I have plans in making more price slots (15 for one month, 25 for three months, 35 for lifetime) to compensate for Some member's amount their willing to spend. You could do it manually, but who has the time now adays to spend the hours in doing it, especially when there is a program out there that can do this automatically.

(Jun 28, 2014 04:38 PM)Integrity™ Wrote: [\[CITE\]](#) There are some issues with the program as it currently sits:

- The scraper is practically useless.
- I have a separate list of 500+ servers, the spreader only gets through < 5% - 10% before displaying that it's done spreading. This is a very, very big issue.

If these can be resolved, I'm sure I can label the program as advertise, because right now, it's not even close.

It's a great program regardless. I spoke with the developer and he said he's going to take care of it as soon as possible.

How are you sure that it's gotten 5%-10% through? The spreader moves REALLY quickly in my experience with it. It went through a 50 servers in less than 5 minutes. (I had logged on on the first one and on the last one.)

I'd recommend contacting the developer regarding these issues instead of posting them here, as you probably won't get as detailed/as good of a response here as a PM or speaking on Skype.

Peppermint Butler - August 5, 2014, 12:47 pm

Sales have been reopened!

We have now squashed some of the release bugs, and are pleased to present you a fully functional and half the price spreader!

If your interested in spreading via YouTube take a look at our program "YouBot" that offers a new and exciting way to spread.

<https://hackforums.net/showthread.php?tid=4271552>

Thank you :)

For the best results:

It is wise to scrape small amounts of servers in increments to prevent connection issues or having your MC account possibly banned (Has not happened so far).

Great, I'm assuming proxy support is on they agenda? When you get either of these done shoot me a pm and I'll surely buy.

Will this bypass most/all anti spam/ad plugins?
How long is the each loop?
Will there be a setting to change the increments between each message?
Sorry for all the questions, if I'm going to buy I want to make sure it's hq ?:

My Review of this Product.

It's good way for spread but it's not optimized i council to the owner to add MultiThreading and Premade word for spread effectively :)

The scraping is not enough speed you can add multithreading too.

So the account maybe get banned by IP from servers for spamming so you can add Proxy Support.

So you can spread a lot with that and get Traffic to your website just you need to make a good Words for spread and make Legit links and the links must be in the interest of the gamers.

It's the end of this review and i give to this product 7/10 so you can get a 10/10 by add propose features.
