Wordlists Saint suggested

Spoiler ([Click to View](#))

(Jun 28, 2014 12:03 PM)?Saint Wrote: [\[CITE\] http://81.4.120.134/slowtech/](#)

~100GB of Wordlists.

It is a Multi-Volume archive so you will need all the parts to extract it for example. 1to6.7z.001 to 1to6.7z.007.

Use 7-zip to extract them.

I suggest only downloading 7-20 lists as most passwords are 7-20 characters long.

There are 9 7to20 sets totaling 80GB. It's very good for standard dictionary attacks.

OLD THREAD:

This is what everyone is replying to not the new wordlists :P

Code I have found something amazing.

A 28GB wordlist which is archived down to 74.4MB.

The wordlist is called: acdc's dictionary.txt

Download link: <http://uploading.com/files/NSMY5TUT/28GBwordlist.rar.html>

It is a great wordlist for md5 password cracking but I don't think the words are long enough for wpa/wpa2.

Either way enjoy guys :).

Tony S - June 27, 2014, 5:11 pm

Terrible wordlist. It's just permutations of a certain character set up to a fixed length, eg ~

aaa
aab
aac
...
aaaa
aaab
aaac
...
aaaaa
aaaab
aaaac

There's no real passwords in it.

There's no real passwords in it.

Damn, I'm on my phone but was hoping this would be a great share. Thanks for the heads up.

Use notepad++ to open it. it won't lag

Abdilo - June 27, 2014, 5:17 pm

(Jun 27, 2014 05:17 PM)bobsmith Wrote: [\[CITE\]](#) Use notepad++ to open it. it won't lag
File is too big to be opened by Notepad++

Tony S - June 27, 2014, 5:20 pm

Notepad++ can't open anything over ~400mb IIRC.

Use [head](#) in conjunction with [tail](#) vice versa, or use some proprietary software specifically built to handle huge files such as [LTFViewer](#).

wow thanks allot for the ltfviewer man and the acdc's dictionary is just as you said but i guess its easier to use a wordlist like that instead of pure bruteforcing.

Tony S - June 27, 2014, 5:34 pm

Speed-wise, GPGPU generally excels far more than CPU accelerated work does, at least for faster algorithms. You'd save a lot of time by using brute-forcing techniques with GPU accelerated tools such as [oclHashcat](#). You should consider wordlists like this obsolete nowadays.

Abdilo - June 27, 2014, 5:47 pm

alright and yeah i do use oclhashcat but i do not use the bruteforce function since the masks usually fuck up with hashcatgui since it can use more then one wordlist at a time.

BTW i will update the thread with list of sites with what wordlists they have since that might be more use to the users here.

Forezza - June 27, 2014, 7:05 pm

What about insidepro wordlists? I must say that they are some of the best around at the moment.

Abdilo - June 27, 2014, 8:26 pm
