Thread: [\[HELP NEEDED\] Browse / Save Buttons Don't Work On My PC!](#)

Nutar - June 28, 2014, 3:20 am

Hello,

So I just came across this problem while trying to save some new PHP code to test it. When I clicked the save button, no window came up for me to choose the directory in which the file should be saved in.

I tried the some browse buttons, used word, used notepad but all of the save / browse buttons don't work.

I think this problem is from Windows itself as when programmers want to add a browse / save button, windows handles that using it's default browse window, I guess.

Did anyone get this problem? Please help me.

Thank you,
With regards,
Calypo.

Please open the Command Prompt as Administrator.

Run the following command:

Code sfc /scannow

Run the following command:

Code sfc /scannow

I did what you said, and here's what I got:

Quote:Windows Resource Protection did not find any integrity violations.

What is your computer's operating system?

Nutar - *June 28, 2014, 3:23 pm*

I formatted my PC and It's working fine now.
