Thread: [Needing help transferring a .deb file to Device](#)

?ngineer - June 28, 2014, 9:54 am

I'm trying to hack a game called Magic Piano, problem is. I have no idea how to transfer a .deb file using Cydia.

I've tried looking at google but they are all confusing, as I can't find "Cydia App Install"

I have iFunbox if anyone is familiar with that, someone told me to use that to easily transfer the files, but i'm 100% confused.

I'm using iPhone 4s on 7.1.1 Jailbreak

Thanks in advance!

Easiest way is to use ifile. Transfer the file using Winscp (openssh needed), ifunbox, or download the .deb on your Iphone.

Once you transfer the .deb to your iPhone. Open ifile and go to the directory where it is located. Press the .deb and then press 'installer'

Found out that just using a Safari Download manager and finding the file online and downloading it from there was the easiest!

Thanks for the help though!
