Thread: [Rat Client isnt connecting](#)

mimi86uk - June 30, 2014, 10:19 pm

I'm testing it while ratting myself.

When i set the DNS/IP to my internal IP or 127.0.0.1, it works fine, but when i try using an external IP or Internal IP via No-ip, it fails to connect.

Very strange. Anyone else have a clue what could have caused this?

Jacywashere13 - June 30, 2014, 10:25 pm

Are you port forwarded correctly?

When you are using your local ip you do not need to port forward.

P??? - June 30, 2014, 10:26 pm

Your an idiot.... <http://www.noip.com/blog/>

mimi86uk - June 30, 2014, 10:26 pm

Well I was told with the vpn im using i shouldnt need to portforward because all ports our open. But i did port forward and still got the same outcome :-(

He's not an idiot, he just hasn't heard. Calm down, not everyone spends 9 hours a day on HF.

koshka1 - June 30, 2014, 10:27 pm

Don't use no-ip as your dynamic dns provider, they've had a huge crackdown on people using their service for exactly what you're doing.

mimi86uk - June 30, 2014, 10:30 pm

WORD!!! Its the first time im hearin this!!

Well i have tested it without no-ip, just with my external ip and still no dice.

You're*

I actually didn't know about this either and have been having the same issue.

Server97 - June 30, 2014, 10:59 pm

You could use your own IP Address if you wasn't planning on spreading.

koshka1 - June 30, 2014, 11:07 pm

no-ip may or may not be the directly effecting the connection, I'm not a RAT expert, but you might want to go to the RAT sub-forum and ask there.

No, again I said this in a different post of mine. Don't use your own connection or don't reveal your own connection, it's shitting where you eat.

mimi86uk - June 30, 2014, 11:16 pm

SnoopyKitten - your username is awesome..

But I cant use my own external IP, that doesn't work either. The only thing that works is my internal IP :-(which sucks

koshka1 - June 30, 2014, 11:34 pm

Thanks, and you might want to check the ports that you're using as your external IP might not have them open

mimi86uk - June 30, 2014, 11:55 pm

Well I ran a netstat, and the ports are definitely being listened to by my rat. But I tried to forward them on my router and still no dice. Using a vpn used to work, but recently I dont know, now even that's not working.
