Thread: [\[Working\] Speed up your Minecraft up to 200%!](#)

Zylicx - July 2, 2014, 4:51 pm

This following tutorial will add alot of FPS (up to 100) and you will gain no LAG (client lag).
If this tutorial doesn't help you, it's time to buy a new PC. ?

FIRST METHOD

1) Close down minecraft.

2) Head over to OptiFine site:

<http://optifine.net/home>

-OptiFine can increase your FPS alot, and for bonus, it makes your textures HD.

3) After downloading, simply click the jar file and click the install button.

4) Head over to Minecraft again and for even more FPS apply these settings:

- Graphics: Fast
- Render Distance: Short/Tiny
- Smooth Lighting: OFF
- Performance: Max FPS
- AdvancedOpenGL: Fast
- Clouds: OFF
- Fog: OFF
- Animations: All OFF
- Sky: OFF
- Stars: OFF

The mod is compatible with: ModLoader, Forge, SinglePlayerCommands, TooManyItems, PlasticCraft, CJB's Modpack, Zan's Minimap, Rei's Minimap, DynamicLights, GLSL Shaders 2, LittleBlocks and many other.

Other tutorial that will also help:

I'd take the Java out of the tutorial, this is just applying a mod to your client and changing a few settings. The player doesn't actually interact with any Java coding or editing. Also I would add that this only works with official released versions.

Nice thread layout and what not though, should help a few players that are newer to Minecraft.

Optifine is updated often so that shouldn't be a problem.

Wakroy - July 6, 2014, 8:16 am

Is it possible to use Optifine with a cheat client?

Zylicx - July 6, 2014, 11:36 am

(Jul 6, 2014 08:16 AM)Wakroy Wrote: [\[CITE\]](#) Is it possible to use Optifine with a cheat client? There are a few hacking clients who have OptiFine in it. But yes you can code it "in".

TheRemixPvP - July 7, 2014, 2:21 am

Doesn't really deal with any java, more like a mod to install to get better FPS, maybe change the title? :P

Sommen - July 7, 2014, 12:41 pm

kinda misleading title. rename it to optifine tutorial or somethin.

Ryan - July 7, 2014, 12:45 pm

The only useful info here is mainly just the list of configuration options to use to speed up your game. Useful for people just getting into the game who don't have a good computer.

(Jul 2, 2014 04:51 PM)Zylicx Wrote: [\[CITE\]](#) 2) Head over to OptiFine site:

-OptiFine can increase your FPS a lot, and for bonus, it makes your textures HD.

What do you mean by "it makes your textures HD"?

Zylicx - July 7, 2014, 3:09 pm

Can't edit the title now.

"Sorry but you cannot edit your post. The Administrator has set it so that posts can only be edited within 1440 minutes of posting."

vinbullet - July 7, 2014, 8:56 pm

Nice post, but most players who have low FPS have usually already sought out this option.

Ulysses S Grant™ - July 8, 2014, 3:45 am

Thanks man I did this on my desktop awhile back now to do it on my laptop.

Zylicx - July 11, 2014, 12:57 pm

Bumping this thread, so more people can see this! :)

ZerFallen - July 11, 2014, 2:16 pm

I don't understand how you come up with 200%. However it's a pretty basic tutorial.

Zylicx - July 11, 2014, 2:44 pm

Nick - July 11, 2014, 5:09 pm

Nice tutorial. But keep in mind different optifine versions help different computers.
