Thread: [How To NUKE YOUR COMPUTER \[Irreversibly Delete All Data\]](#)

rudeman - July 3, 2014, 11:21 am

Are YOU being Vanned by the FBI ?? Have you indulged in some 1337 VENTURES that can risk you FEDERAL IMPRISONMENT? Do you want to DESTROY ALL EVIDENCE which would otherwise get you LOCKED UP?!?!

In this guide I'll teach you how to IRREVERSIBLY DELETE ALL DATA from your machine. ALL you need is a 1+ GB USB / FLASH Drive.

Downloads:

[DBAN-2.2.8_i586.iso](#)

[Universal USB Installer](#)

Instructions:

1. Open Universal-USB-Installer-1.9.5.4.exe

2. Select DBAN from the drop down list and follow the on-screen instructions

3. Keep the USB plugged into your port since you never know when you might have to nuke all your data.

4. When the time comes, BOOT your computer, go to BIOS or BOOT MENU and choose your USB / FLASH Drive, now you will be greeted with this screen:

[img]http://www.pendrivelinux.com/wp-content/uploads/DBAN-On-USB.png[/img]

5. Type autonuke with your keyboard and ALL data on ALL drives on the computer (including your USB) will be wiped.

Your feedback is appreciated and makes me smile! Leave your opinions below!

The humor is on the top of this article is not to be mistaken for real life situations... If the FBI are on your tail, kiss your family goodbye and prepare for the clinker

signasty - July 3, 2014, 12:33 pm

Yes, that is one way of getting ride of data. Or you could take out your hard drive and drill it, light it on fire, run it over, then toss it in a river :-D

??????? - July 3, 2014, 3:29 pm

Hey Family.

This is actually a very solid post. I appreciate it, and certainly bookmarked the file. However, doing this remotely would be more personally impressive. (Easily done too).

Poniac9 - July 3, 2014, 3:40 pm

A cool way to get rid of one's data. Definitely will recommend to some friends.

rudeman - July 3, 2014, 4:06 pm

(Jul 3, 2014 03:40 PM)Poniac9 Wrote: [\[CITE\]](#) A cool way to get rid of one's data. Definitely will recommend to some friends.

Thanks! Glad you liked it ?

Talu - July 3, 2014, 5:05 pm

This could come in useful, thanks for posting.

Autopost - July 3, 2014, 5:06 pm

Useful guide OP, posting to view this later.

xxPATRONxx - July 3, 2014, 5:19 pm

thanks for this post, you never know when this might come in handy

going to try it later

Br?ndon - July 3, 2014, 5:25 pm

Seems like a pretty good way to get rid of some data.

Nice share OP

JHendrix - July 3, 2014, 9:12 pm

This may come in very good handy ?

Thanks for the tut mate

rudeman - July 4, 2014, 1:06 am

No problem! Glad you people liked it!

?Opulence - July 4, 2014, 1:07 am

hirens also has a boot utility like this one. if youre really desperate though just drill a hole in your disk lol

Erwin Schrödinger - July 4, 2014, 1:08 am

I really appreciate this tutorial!

Really HQ, and I may get use for this is the future!

I'm posting to bookmark!

Thanks for contributing to the community. :)

NoodleBot™ - July 4, 2014, 1:14 am

Really strange that there wasn't already a tutorial for the most popular drive wiping software. You should supply the information about dban however.

Nice job the walk through.

Otherside - July 4, 2014, 3:01 am

Quote:Are YOU being Vanned by the FBI Huh? Have you indulged in some 1337 VENTURES that can risk you FEDERAL IMPRISONMENT? Do you want to DESTROY ALL EVIDENCE which would otherwise get you LOCKED UP?!?!?

You sir would be a great salesman. :)

But great share bud! Thanks!

rudeman - July 4, 2014, 3:09 am

To people saying you can drill the drive; If you're being raided would you really go look for a drill?

3r1c - July 4, 2014, 4:09 am

I came across this program on Hiren's some time ago, but i didn't knew how to use it.

Thank you for this info, mate.

Just some questions:

1. How long does it take too nuke a 500GB drive?

2. Is this a zero-level format?

SIM-1858092 - July 4, 2014, 10:55 am

Works well if the fbi is knocking on your door :))

Dafull97 ?

RelationShit - July 4, 2014, 10:58 am

Someone test this on your old non-used computer and record it or something lol

?Chief Keef. - July 5, 2014, 3:43 am

Thanks for the guide. posting to see this later.

rudeman - July 9, 2014, 12:25 pm

Bumping for anyone who might need this! Enjoy :)

Moon Rock - July 9, 2014, 12:28 pm

This looks real cool, however I'd prefer to swipe my hard drive with a magnet if anything happens.

Mikrozeser - July 9, 2014, 12:28 pm

Nice guide. Thanks :)

i think i can use this for many things

+Haze - July 9, 2014, 12:35 pm

Would that even work properly? LOOL

rudeman - July 9, 2014, 12:39 pm

(Jul 9, 2014 12:35 PM)+Haze Wrote: [\[CITE\]](#) Would that even work properly? LOOL

It will corrupt the data for-sure but I wouldn't count on it if there is any critical material on the HDD.

NoodleBot™ - July 9, 2014, 12:43 pm

(Jul 9, 2014 12:39 PM)Family Wrote: [\[CITE\]](#) It will corrupt the data for-sure but I wouldn't count on it if there is any critical material on the HDD.The magnet would be useless and get you a tampering or destroying evidence charge.

Force magnetic microscopy will correct and bring the scrambled bits and bytes back to the top.
Good fight.

Moon Rock - July 9, 2014, 12:44 pm

(Jul 9, 2014 12:43 PM)NoodleBot™ Wrote: [\[CITE\]](#) The magnet would be useless and get you a tampering or destroying evidence charge.

Good fight.

Or you can just break the seal on the HDD and let dust take the fight.

LOLdropper - July 9, 2014, 11:44 pm

Thanks for the tutorial Mate.Really helpful for all the Hackforums guys around and specially after this No-IP thing i hope this is best for most of us.HQ Post Buddy !

elite32 - July 10, 2014, 1:10 am

This may come in handy.

If im in a rush, Ill just throw my Hard drive in a oven.

Nullware - July 10, 2014, 1:14 am

I would probably just run it under the sink water. and Snap it in half

Pillows - July 10, 2014, 1:16 am

Or you could just sledgehammer the hard drive. There's no way anyone can get data from that after the damage.

Zanwald - July 10, 2014, 1:20 am

I'm going to bookmark this for later use.

aikone - July 10, 2014, 4:41 am

Awesome tool for deleting data, but I don't see no use for this when FBI knocking at your door because it takes too much time. They probably would un-plug power cord and all your secret files wouldn't be deleted. :)

Firmus - July 17, 2014, 9:50 am

Thank you for the tool mate :D It can be usefull if you want to get a revange on one of your friends.

Doktor P1ng - July 17, 2014, 10:03 am

Bookmarked! Gonna use it whenever I need to get rid of data

Sunkist S0D4 - July 17, 2014, 11:16 am

What wipe is the most secure, there are multiple methods. Some being very quick others being very long.

Whats the most secure yet not extremely long method?

Its always a great idea to carry a burned CD of DBAN everywhere you go. Good tutorial, everyone should know this already. ?

Brule - July 17, 2014, 3:34 pm

Thank you for this, may do a test/check it out later.

SIM-2373217 - July 27, 2014, 8:17 pm

Does this also remove bios and boot menu?

BottomNotch - July 28, 2014, 12:19 am

This could be useful in the future...

2nd method: Nuke ur city, FBI can't catch u if u dead.

Firmenssen - July 28, 2014, 3:54 am

Bookmarked this could be fun to try :D

Byron the God - August 1, 2014, 3:57 pm

This is very useful thanks for the post OP

MatiasMunk - August 2, 2014, 12:45 am

Might be useful, but let's be realistic here.

If the feds are knocking at your door, you won't be nuking ur data right away, without having checked whom could be at the door, correct?

Now, say the feds are knocking your door. You open the door, they have a warrant to search ur place, what should you do now? There's only three ways this could turn out.

1. You let them in, but quickly as you are (NINJA) you run to your computer, quickly turn it off and boot it up again.

You'll have to wait for the bios, and then you have to choose the boot up protocol.

That's 20-30 seconds right there (You'll be caught by now, but let's resume with the story)

You boot up DBAN and type autonuke, how long will this process take? 10-15-20 minutes? Man let's face it, it's useless. You'll be caught by then.

2. You admit you did the crime, and go to prison.

3. You think you're a god and pretend to be a ninja, and you run away in the hopes you can escape

the feds.
YOU CAN'T.

Either way, prison time.

Picksley - August 6, 2014, 4:33 am

Bookmarked this, you never know whats going to happen. c:

vagabund132 - August 6, 2014, 10:02 am

Thanks for this, I will download the file and put it on my spare USB :)

CYP2D6 - August 6, 2014, 10:06 am

Seems like a good idea, but having a legitimate back up drive in there would be a good plan too.

How will you explain the synchronized-cop-break-in-drive wipe intention?

Destroying evidence is also a crime

Anyhow, usefull

Thanks

Elixirz - August 6, 2014, 4:47 pm

(Jul 17, 2014 09:50 AM)Firmus Wrote: [\[CITE\]](#) Thank you for the tool mate :D It can be usefull if you want to get a revange on one of your friends.

Oh damn, that's pretty brutal thing to do.

St4ck - August 6, 2014, 4:48 pm

this will shit all over your hard drive lol

NoodleBot™ - August 6, 2014, 4:50 pm

(Aug 2, 2014 12:45 AM)MatiasMunk Wrote: [\[CITE\]](#) Might be useful, but let's be realistic here.

3. You think you're a god and pretend to be a ninja, and you run away in the hopes you can escape the feds.

YOU CAN'T.

Either way, prison time.

Actually it will take several hours. This is not something to do in a panic at the last minute. Obviously.

R^ptor - August 6, 2014, 10:16 pm

I was think why the fuck would somebody ever need this, but i got it now lol (its too late to think)

Hidden™ - August 6, 2014, 10:17 pm

I just bookmarked this shit lol, I will probably never need it though.

DrPanda - August 8, 2014, 11:18 am

This is grate, Thanks man now I have my emergency wiper ... I was using boot a nuke but its not fast enough does anyone know how to run this from within windows without having to reboot

Respawnable - August 8, 2014, 3:43 pm

(Jul 3, 2014 03:29 PM)infect3d Wrote: [\[CITE\]](#) Hey Family.

This is actually a very solid post. I appreciate it, and certainly bookmarked the file. However, doing this remotely would be more personally impressive. (Easily done too).

Yeah, just rat yourself and follow the same instructions right?

herman773 - August 8, 2014, 4:29 pm

Nice job man this came out very handy.

Good job on the tutorial, it became very handy for me.

rudeman - August 8, 2014, 4:47 pm

(Aug 8, 2014 03:43 PM)Respawnable Wrote: [\[CITE\]](#) Yeah, just rat yourself and follow the same instructions right?

The rat isn't accessible anymore if you turn off your system ?

S p i d e R - August 8, 2014, 4:54 pm

You can also just delete your System32 and that would wipe your whole computer :D

G3TRoot - August 9, 2014, 8:55 am

Its good I guess if you have time. If they are banging down your door I would go with the drill and microwave method.

Keith Ape - August 13, 2014, 12:51 am

Dang, I thought this was a joke at first.

Then, I noticed how it can be useful!

Great tutorial man, should come handy in the future!

?

justsmil3x - August 13, 2014, 5:51 am

This looks like it could come in handy at some point. Nice tutorial mate

aproxyb - August 13, 2014, 6:37 am

Will definitely be checking this out later. Thanks for sharing

LanceRauler - August 16, 2014, 10:19 pm

Amazing tutorial. This might be usefull for a project me and my friend have been putting aside for months now. Thank you.

rudeman - August 17, 2014, 2:58 am

No problem, glad you guys are liking it!

shiika - August 17, 2014, 7:33 am

Very well done. People like you who contribute to the community are great (although I haven't myself). Keep up the good work!

ImAeonz - August 19, 2014, 3:57 am

Why would anyone do this to their own computer! And it would be hard to do on someone elses computer since it would take time to download the files and it would probably take time to nuke the computer! Anyways great thread!

Tepidaron99 - August 19, 2014, 4:30 pm

Pro tip: If you don't want to delete the DBAN then download it to a CD instead of a usb.

Blackbullz - August 21, 2014, 3:32 am

Great tutorial buddy, I've tested It and is working perfectly.

BruskCastle - August 29, 2014, 12:39 pm

Nice tut, setting up my backup USB now. Plus thanks for the Lulz (Are you being VANNED?)

Jazzo - September 7, 2014, 8:15 pm

thanks just made one :D

rrrrr.....

Dragon. - September 7, 2014, 8:18 pm

What if you're on a Mac tho? Lelelelel. :D

Abstractive - September 7, 2014, 8:21 pm

(Sep 7, 2014 08:18 PM)Dragon. Wrote: [\[CITE\]](#) What if you're on a Mac tho? Lelelelel. :D
Who uses Macs on here?

To stay on topic, this can be handy in some rare but sticky situations. I bookmarked this thread. Better safe than sorry.

Dr.X - September 7, 2014, 8:21 pm

This is a pretty nice guide. No use for me at the moment though.

Tahh - September 15, 2014, 2:21 pm

What is your skype?

'bout a week ago, week ago
Fuck with us and then we tweaking, ho
Run up on that nigga, get to squeezing, ho
Everybody catching bullet holes
Niggas got me on my bully, yo
I'm a run up, put that gun on 'em
I'm a run up, go dumb on 'em
Niggas got me on that young shit
Got me on that go dumb shit

cronos_blackpaw - September 15, 2014, 6:01 pm

I have used Dban before it works pretty well definitely irrecoverable the only problem with heat assisted write cycles is that they take forever :/
