Thread: [Steam Group inviter](#)

Lerox1337 - July 3, 2014, 12:48 pm

Huhu Guys,

I am looking for a Coder to write me a steam group inviter.

Nothing special, just login and invite people to the group I want - doesn't have to be in background even, can run it on my laptop.

Only Problem I have right now is that It seems impossible for me to invite people through chrome on that laptop.

After like 400 invites my macro still worked, but the invites didnt reach the people - that's why I am asking for your help.

Not sure about the amount, but they payment would be through a verified Paypal adress

This is probably a limitation by Steam's servers, meaning there is no workaround. In other words, I don't think this can be done without encountering the same issue.

Well I have found out why it happens => opening too many tabs in a amount of time => gives this timeout

Still a macro isnt the best solution, if someo ne wants/can offer a tool, I would consider buying it/paying for the coding part
